1 Introduction

There are two official statistical sources in Spain that provide results on unemployment: the Economically Active Population Survey (EAPS) carried out by the National Statistics Institute, on a quarterly basis, and Registered Unemployment (RU), published on a monthly basis by the Public State Employment Service (SEPE). There are noticeable differences in level between the two and, occasionally, also in their evolution, which in principle can be explained by the disparity in origin, execution and methodology of the respective sources.

However, one of the tasks of the Short-term Labour Market Statistics Group¹, of the High Council on Statistics is to explain these differences in greater depth and to try to reconcile the results of the two sources.

To this end, the method used until 2005 was based on approximating the concepts used in both sources to find conceptual identities on which to base the comparison. In essence, it consisted of contrasting the number of job-seekers according to EAPS classified as unemployed in the survey (adding, in the case of the years 2001 to 2004, the groups excluded from EAPS unemployment due to seeking employment exclusively through public employment offices without having active contact with said offices) with the figure resulting from adding to the registered unemployment the groups excluded from it but which would be considered unemployed according to EAPS methodology².

The reconciliation was therefore carried out in macro or outcome terms (without crossing the individual data from the two statistical sources). However, in 2005 the administrative register of unemployment and the survey underwent methodological changes that made it impossible to continue applying this method.

From then on, the reconciliation is approached in another way, now in 'micro' terms (by crossing individual survey data with the databases of the Public State Employment Service) to check whether the concept of job-seeker, theoretically measured in the same way in EAPS and SEPE, is in effect the same. That is to say, the answer of each interviewee in EAPS to the question about registration as a job-seeker in public employment offices is compared with the real situation of that person in the SEPE register of job-seekers. Subsequently, we descend to analyse in particular the registered unemployed job-seekers and the persons classified as unemployed in EAPS.

¹ The Group is made up of representatives of the National Statistics Institute, Ministerial Bodies, trade unions, employers' organisations, universities, the Bank of Spain and other entities specialised in analysing the labour market.

² See any of the reconciling publications for figures from those years. In particular that of 2001 is available at http://www.ine.es/docutrab/empleoyparo/ep_empleo_paro.pdf

The results of the first study conducted, referring to the second quarter of 2005³ showed significant discrepancies between registration in a public employment office according to EAPS and SEPE. Finally, it was concluded that the information from the survey on registration at the employment office was not sufficiently reliable to be used as key data for the comparison of both sources.

However, the Working Group on Short-term Labour Market Statistics agreed to repeat the microdata analysis exercise for the second quarter of 2007, due to the fact that it was the year in which the clarification of registered *as a job-seeker* was included in the EAPS question (until then it was only asked if the person was registered in a public employment office, but the reason was not specified). The aim was to check whether the inclusion of the clarification reduced the discrepancies obtained from the study based on 2005 data. The results obtained showed that, despite the modification of the question, the discrepancies still existed. However, it was agreed that similar analyses would be carried out again every two years.

A new study is now presented for the second quarter of 2019, following the last study carried out in 2017. It sets out the process that has been carried out for crossing the microdata corresponding to that second quarter, the results obtained in relation to those extracted from the 2017 figures and the conclusions drawn from it. The microdata corresponding to persons from 16 to 74 years old have been selected, as it is the age group in which a person can be considered ILO unemployed according to the current Eurostat guidelines

2 Glossary: previous definitions

The following terminology is used to describe the results:

- **Total (initial universe):** these are all those persons with an age greater than or equal to 16 years and less than 75 years in the EAPS sample for the second quarter of 2019 whose identification document (ID card, passport or residence card) is assigned from the Register.
- **SPES job seekers:** those who are registered as such in the SPES database, either as job seekers or as claimants of other services, and whose application is active or suspended (the latter can be assimilated to those active).
- **SEPE non-job seekers:** are those persons who are either registered as job-seekers in this body but their application is inactive, or have not been found in the SEPE database. In other words, it is considered that those who have been job-seekers but have already found employment (inactive applications) or those who have not been, to date, registered as job-seekers in SEPE are not job-seekers according to SEPE.

³ See the publication on reconciliation of figures (second quarter of 2005) prepared by the Working Group on Short-term Labour Market Statistics of the High Council on Statistics at http://www.ine.es/daco/daco42/daco4211/compa_paro_2005.pdf

- **SPES registered unemployment:** The concept of "registered unemployment" refers, according to Order of 11 March 1985 of the Ministry of Labour and Social Security, to employment applications pending on the last day of the month at public employment offices, excluding those corresponding to the following situations: employed workers; workers not immediately available for work or situation incompatible with it (retired pensioners and those with total or severe disability, over 65 years of age, workers in a situation of temporary disability, maternity or medical leave, students of regulated official education under 25 years of age or first job seekers and occupational vocational training students, when their teaching hours exceed twenty per week, have a maintenance grant and are first job seekers); workers who apply exclusively for a job with specific characteristics (at home, for a period of less than three months or with a working week of less than 20 hours, those who register at public employment offices as a prerequisite for participating in a selection process for a specific job and those who apply for a job exclusively abroad); temporary agricultural workers receiving special unemployment benefit who are receiving it or who, having exhausted it, have not elapsed a period of more than one year from the creation of the entitlement; applicants with a suspended application and those who refuse labour insertion actions appropriate to their characteristics.
- **EAPS Registered/Unregistered persons:** **EAPS registered persons** are those who are registered at a public employment office according to the information collected by EAPS, i.e., all those persons who are 16 years of age or older and less than 75 years of age in the EAPS sample for the second quarter of 2019 whose answer to the question, *On Sunday of the reference week, were you registered as a job-seeker in a public employment office?* is affirmative. **Otherwise, they are considered as EAPS unregistered persons.**
- **EAPS unemployed persons:** are those persons who are considered as such according to EAPS (have not worked or been employed in the reference week, are *actively* seeking employment and are available to start working in the two weeks following the interview. The condition of active search is not required if they have already found a job in which they will be incorporated in the maximum term of three months).
- **EAPS non-unemployed:** are those persons who, according to EAPS, are classified as employed or inactive.

3 Process

This study takes the **EAPS sample** corresponding to the **second quarter of 2019** and selects the group of persons with **an age greater than or equal to 16 years and less than 75 years**. The identification document (ID card, passport or NIE) of each interviewee in the survey is assigned from the Register based on their personal data (name, surname, date of birth, etc.). Of the total of 121,102 persons between the ages of 16 and 74 in the EAPS sample, the identification document has been retrieved for 120,160 of them, that is, for 99.22%. In the

case of foreign nationals in the sample, identification has been assigned to 90.44% of them⁴. The sample used in the study is made up of 113,177 Spaniards and 6,983 foreigners, representing 94.19% and 5.81% of the total with identification document, respectively.

SPES searches each of the individuals in its database⁵, to determine whether or not they were registered as a job-seeker in the EAPS **reference week**. In the affirmative case, it records the status of the SEPE application (active, inactive or suspended) and how long the applicant has been a job-seeker for those who were in active or suspended status. It also considers the status in the **three months prior to the reference week** in order to search for each person in the Public Employment Services. In this way, it is studied whether the results are influenced by the short period of time considered—one week—in case EAPS respondents are referring to a situation in a longer period.

The results obtained from these analyses are presented in the following sections.

4 Results

4.1 OBTAINING OF THE MAIN RESULTS. SAMPLE DATA. SECOND QUARTER OF 2019.

In line with the previous years from 2013 onwards, the main results obtained by crossing the 120,160 persons aged between 16 and 74 for whom an identification document has been found (hereinafter, they will be referred to as “total”) with the information stored in the SEPE databases, can be structured as follows, in terms of time reference:

- **In relation to the EAPS reference week:**
 - Classification of the total number of persons in the EAPS sample under study, according to whether or not they are considered as job-seekers in SEPE (point 4.2).
 - Contrast for the EAPS sample under study of the concept of job-seeker according to both sources (registered as EAPS job-seekers versus SEPE job-seekers). Within this analysis, we particularly examine the group formed by those persons who declare in EAPS to be registered in a public employment office, but who are not registered in SEPE (point 4.3).
 - Comparison of EAPS unemployment and registered unemployment in the Public Employment Services (SEPE) (point 4.4).

⁴ In 2017, 116,828 people had an identification document, which made up 99.35% of the total and incorporated 91.97% of the foreigners in the original sample.

⁵ As in previous reports from 2013 onwards, the search has been extended to the whole period covered by the SEPE database. In previous reports it was limited to one year back.

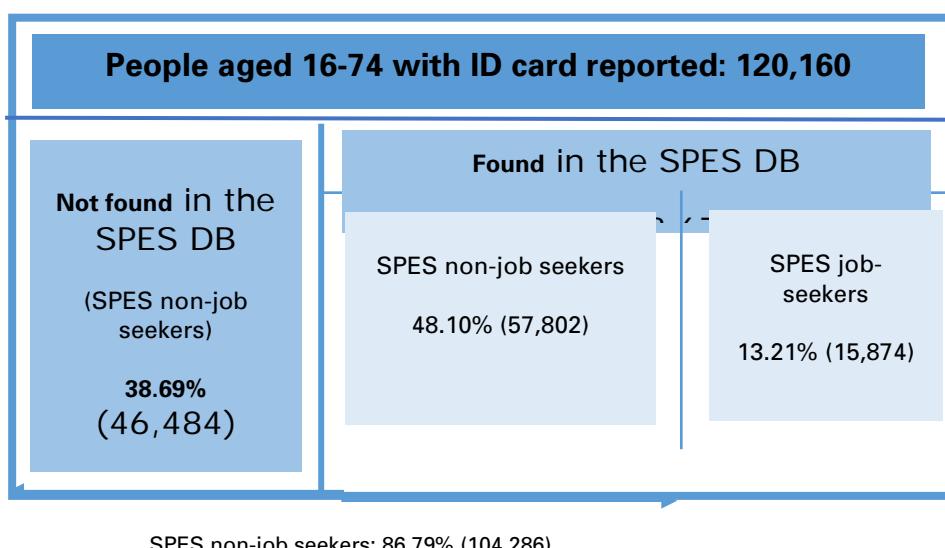

- Classification of the total number of SEPE job-seekers according to whether or not they receive unemployment benefit (point 4.5).

- **Considering the three months prior to the EAPS reference week:**

- Study of whether the results obtained from the search in SEPE during the reference week vary by extending the reference period under consideration to three months (point 4. 6).

4.2 CLASSIFICATION OF THE EAPS SAMPLE UNDER STUDY INTO SEPE JOB-SEEKERS AND NON-JOB SEEKERS. SAMPLE DATA. SECOND QUARTER OF 2019.

The results obtained are presented in the following graph:

From the data represented in the previous graph, it can be seen that:

- A total of **61.31% of the total number of persons have been found in the SPES databases**. These are those who at some time have been or still are job-seekers according to SEPE (tables 1.1 and 1.2 total). Approximately **22% of them** (15,874 persons) **appear as job-seekers in SEPE during the reference week given by EAPS** (tables 2.1 and 2.2 total). Consequently, the **percentage of SPES job-seekers over the total** is limited to **13.21%**.
- A total of **38.69% of the total number of persons has not been found in the SPES databases** (tables 1.1 and 1.2 total). **SEPE non-job seekers** are made up of the 46,484 not found in SEPE (since they do not appear and have not appeared as job-seekers through this service), together with all those people who have been registered in SEPE but their employment application is inactive during the EAPS reference week. The latter group is made up of approximately 78% of those found in the databases (57,802 people). When

adding both groups, it is obtained that **the percentage of SEPE non-job seekers with respect to the total** amounts to **86.79%** (tables 2.1 and 2.2 total).

- By nationality, the percentages among the Spaniards in the EAPS sample under study, of those found both in the SEPE databases and among SEPE job-seekers (60.76% and 12.87% respectively) are similar to those obtained for the total of the sample (61.31% and 13.21% respectively).

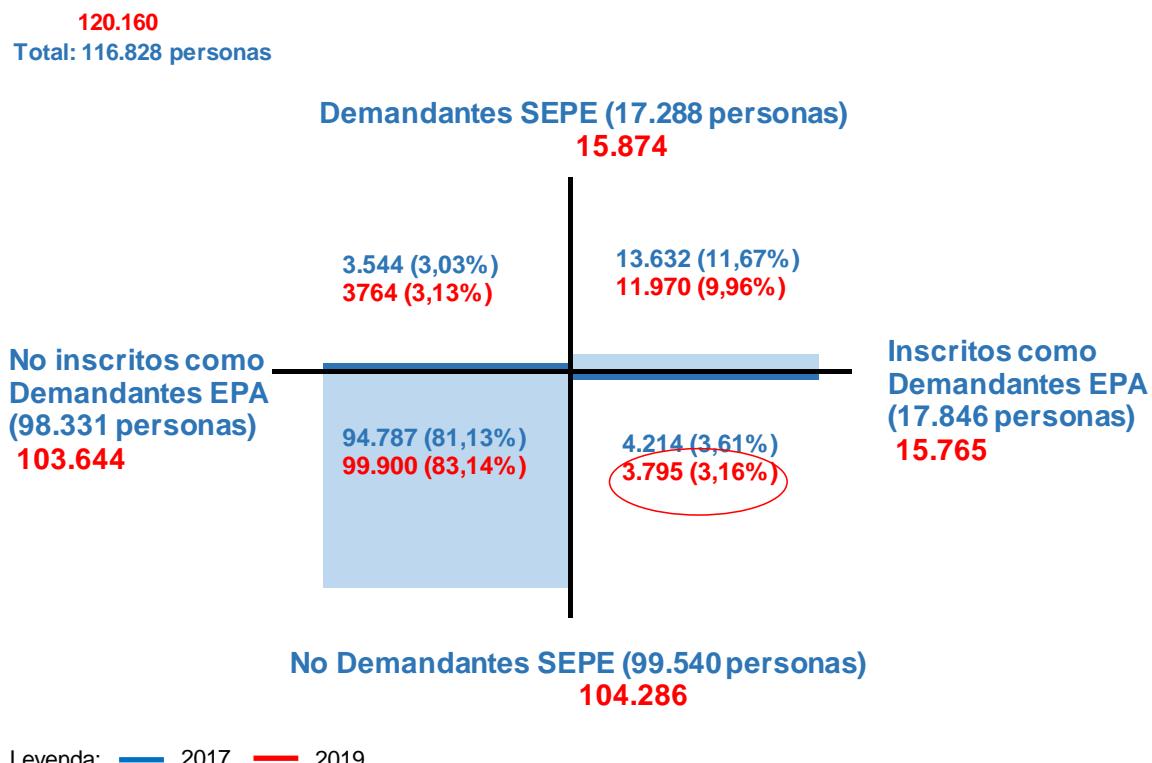

However, said percentages are clearly higher in the part of the sample of persons with foreign nationality (namely, 70.23% and 18.73% respectively) (tables 1.1, 1.2, 2.1 and 2.2 Spanish and foreign nationals).

4.3 COMPARISON EAPS REGISTERED PERSONS VS SEPE JOB-SEEKERS. SAMPLE DATA. SECOND QUARTER OF 2019.

4.3.1 General Results.

If the total of 120,160 people are classified according to whether they are job-seekers in SEPE offices and if they declare in EAPS that they are registered as job seekers in a public employment office⁶, the following graph is obtained (red: 2019, blue: 2017):

⁶ Does not include *Doesn't know/no answer* obtained as a response to the survey when asking the interviewee the question about registration as a job-seeker in a public employment office. There are 731 people (0.61% of the total), 140 of whom appear as *SEPE job-seekers*.

In relation to the situation in 2017, in 2019 disagreement remains between both sources, with the distribution between the groups of the discrepancies varying slightly: **In 2019 the percentage of people who declare in the survey not to be registered in a public employment office and that they are job-seekers in SEPE increases** (this group goes from 3.03% of the total in 2017 to 3.13% in 2019), while **the percentage of people registered according to EAPS who appear as non-job seekers in SEPE decreases** (from 3.61% in 2015 to 3.16% in 2019).

As was the case in 2017, it seems that the groups in which there is discordance between the two sources do not represent a high percentage of the sample. However, if the focus is placed on certain groups, it is observed that, for them, the discrepancies between the situation declared in EAPS and that obtained from SEPE with respect to the demand for employment continue to be important.

Returning to the study of the **proportion of SEPE job-seekers within EAPS registered persons in the sample**, which behaves **in a similar way to 2017**, it is observed that there are 15,765 EAPS registered persons in the sample, of which 11,970 appear as job-seekers also in SEPE. According to the figures presented in the previous graph, those registered according to EAPS and SEPE correspond to 9.96% of the total (11.67% in 2017). In turn, these 11,970 represent 75.93% of the total of the 15,765 EAPS registered persons (tables 2.1 and 2.2 total). Similarly, it is obtained that the persons who declare to be registered as job-seekers in EAPS but

who, subsequently, do not appear as job-seekers according to SEPE are 3,795, which corresponds in percentage terms to 24.07% of EAPS registered persons.

It should be noted that, with the introduction in 2007 of the clarification of registration as a job-seeker in the EAPS questionnaire, **the percentage of EAPS registered persons who did not appear as job-seekers in EAPS fell by more than four points**, from 32.57% in 2005 to 28.26% in 2007. Now in 2019, with a higher percentage of people with an identification (99.22% of the initial universe) the differences have increased slightly, 24.07% in 2019 compared to 23.61% in 2017 (table 2.2 total). Nevertheless, **there are still important discrepancies to be taken into account between the results obtained from both sources**. In fact, there are 3,393 of the 3,795 people who declare to be registered as job-seekers in EAPS and then they are not in SEPE, whose application has been cancelled by SEPE. This suggests that these individuals are very likely not aware of their actual administrative situation in SEPE when responding to the EAPS (table 8).

On the other hand, **as in 2017**, in the case of non-job seekers in both sources, the degree of coincidence between the information collected in the survey and that recorded in SEPE is very similar, with **96.37%** (96.40% in 2017) **of those not registered as job-seekers according to EAPS were non-job seekers in SEPE** (table 2.2 total).

The **results** obtained when considering the **nationality** variable are **similar** to those obtained in **2017**. In effect, the percentage of Spaniards registered as job-seekers in EAPS but not as job-seekers in SEPE is 23.28%. This figure differs by less than one percentage point from that obtained in the total sample, 24.07%. In 2017, these values represented 23.03% of the total number of Spaniards compared with 23.61% of the total. In turn, **among foreigners, the difference between the two sources is much more pronounced**: 32.45% of the total number of foreigners declare in EAPS to be registered as a job-seeker in SEPE but do not appear in the databases of the public employment services. In **2017** this percentage was **30.71%**. This figure continues to differ by more than eight points with respect to the 24.07% obtained in the total sample.

On the other hand, the degree of coincidence between those not registered in EAPS and not appearing as job-seekers in SEPE has decreased slightly from 96.40% in 2017 to 96.37% in 2019. This is repeated when considering Spaniards (96.59% in 2017 as opposed to 96.55% in 2019) while in foreigners it has increased, going from 92.72% in 2017 to 93.09% in 2019 (tables 2.1 and 2.2 Spaniards and foreigners).

4.3.2 EAPS registered persons SEPE non-job seekers

Since there is such a high discrepancy in the **group that declares in EAPS to be registered as a job-seeker in a public employment office and that does not appear as such in SEPE**, it is studied in depth to try to **characterise it**, as in 2017. For this purpose, we consider its **distribution by sex, age group, EAPS classification of its activity (employed, unemployed or inactive), Autonomous**

Community and person who responds to the survey questionnaire (the person itself or another person in the dwelling) (table 3). The conclusions reached are:

- 1) The largest percentage of those who report being registered at a public employment office according to EAPS and who are not registered as such in SEPE is concentrated in the younger age groups (mainly 25-34 years). This occurs in most Autonomous Communities.
- 2) This group, in general, is made up of more women than men. In 2019, the proportion of women at the national level is slightly higher than in 2017 (55.52% women in 2019 as compared to 53.63% in 2017).
- 3) As was the case in 2017, the highest proportion of EAPS registered persons and SEPE non-job seekers at the national level is found among those classified in the survey as unemployed (in 2007 the employed population predominated). At the Autonomous Community level, in 2019 this situation is repeated in almost all the Autonomous Communities.
- 4) Once again, more EAPS registered persons and SEPE non-job seekers have been found in the questionnaires answered by another person in the dwelling than in those answered by the person itself.

In short, in this study **there is also no clear concentration of the sample in any of the variables analysed.**

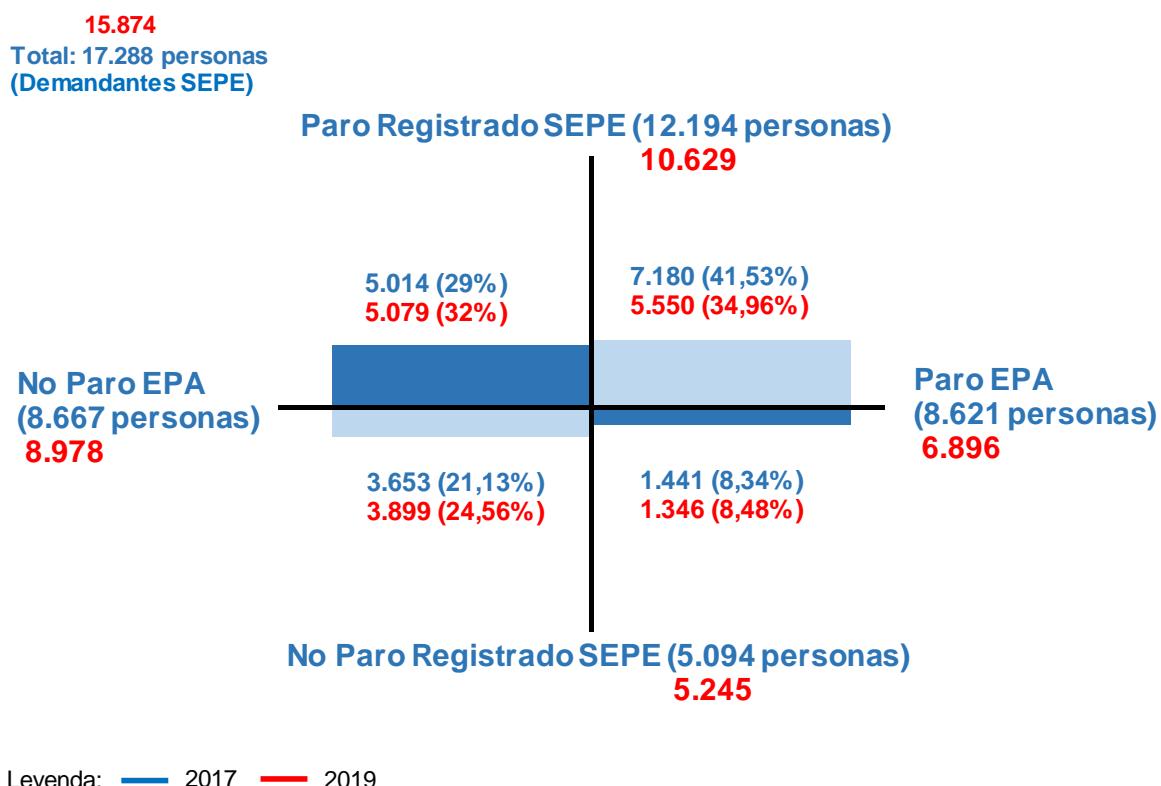

4.4 COMPARISON OF REGISTERED UNEMPLOYMENT AND EAPS UNEMPLOYMENT. SAMPLE DATA. SECOND QUARTER OF 2019.

Although registered unemployment and EAPS unemployment correspond to different concepts, as in the studies carried out from the 2013, 2015, and 2017 data, a comparison has been made between the two, in order to study the extent to which these concepts coincide in practice. For this purpose, two groups have been studied, for which an analysis has been made of their classification as EAPS unemployment and registered unemployment:

- a) SEPE job-seekers (15,874 persons, in absolute terms, table 4).
- b) SEPE job-seekers who are also listed in EAPS as such (11,970 persons, table 5).

The **results** obtained are represented in the following graphs:

Graph 4.4.a). SPES job-seekers (15,874 persons)

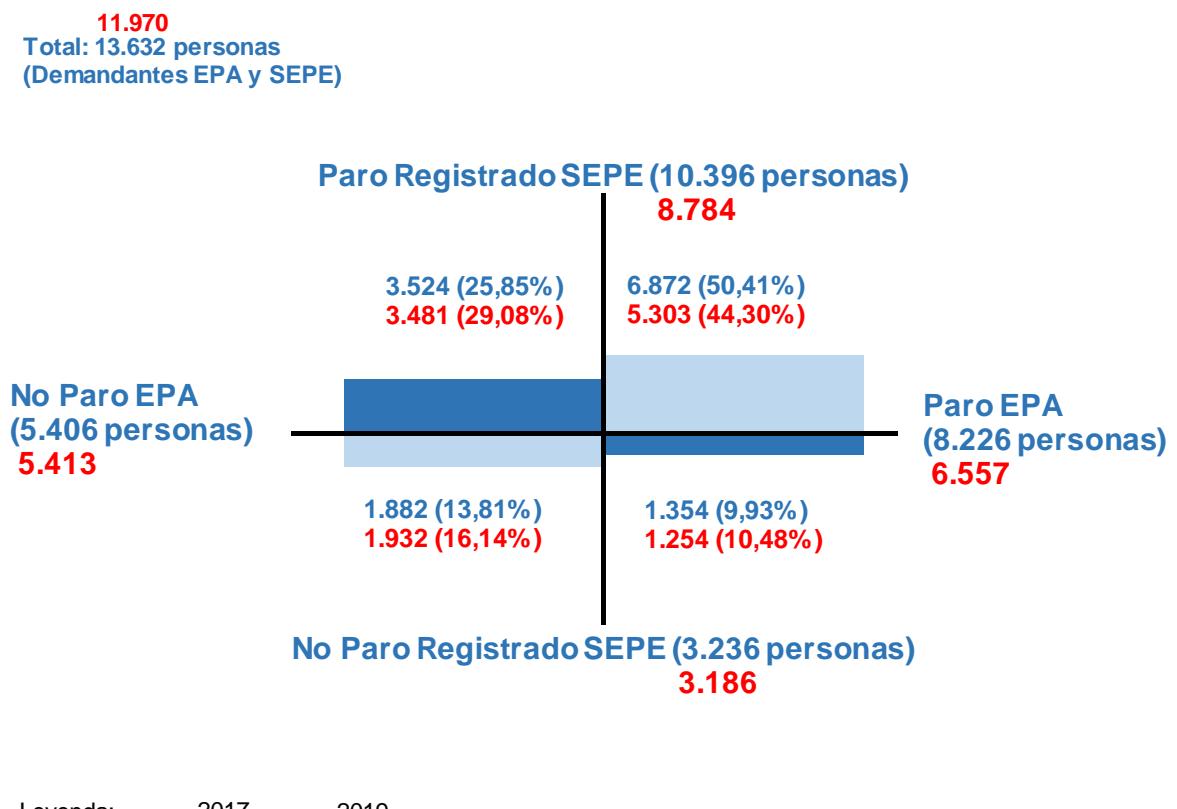

From the data shown in graph 4.4.a) (data from table 4), it can be seen that:

- A total of 34.96% (41.53% in 2017) of SEPE job-seekers are classified as registered unemployed persons and are also unemployed according to the survey.
- Reciprocally, 24.56% (21.13% in 2017) of the job-seekers are classified as registered non-unemployed persons and are also not considered EAPS unemployed persons.

These two groups described, in which the positive or negative situation of the person in relation to the EAPS unemployment and the registered unemployment coincide, make up 59.52% of the total of SEPE job-seekers, less than 3.5 points than in the previous study (62.66% in 2017).

Graph 4.4.b). EAPS and SPES job-seekers (11,970 persons)

From the results shown in graph 4.4.b) (data from table 5), it can be seen that:

- A total of 44.30% (50.41% in 2017) of those simultaneously classified as EAPS and SEPE job-seekers end up being classified both as EAPS unemployment and registered unemployment.
- Reciprocally, 16.14% (13.81% in 2017) of those classified as job-seekers in both sources are not registered unemployed persons and are not considered unemployed according to the survey.

In this case, the two groups in which the positive or negative situation of the person with respect to the **EAPS unemployment and the registered unemployment coincide**, cover 60.44% of the total of persons who appear as job-seekers both according to SEPE and the EAPS (64.22% in 2017).

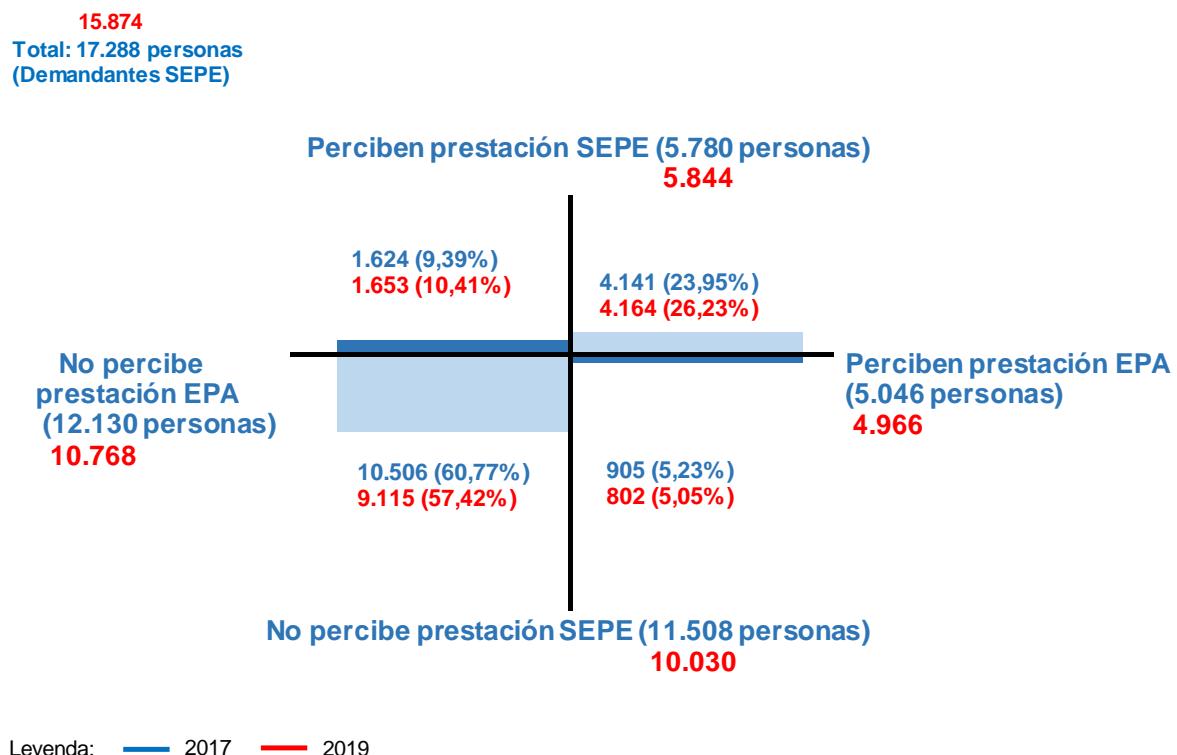

Consequently, after corroborating it with the evidence from the 2017 and 2019 analyses, it can be concluded that **the correlation between the unemployment concepts defined in each of the sources is very weak**.

4.5 CLASSIFICATION OF THE TOTAL NUMBER OF SEPE JOB-SEEKERS ACCORDING TO WHETHER OR NOT THEY RECEIVE UNEMPLOYMENT BENEFIT. SAMPLE DATA. SECOND QUARTER OF 2019

With the incorporation of the question in the survey on the receipt of some type of unemployment benefit or subsidy, an attempt has been made to cross the information provided by the respondent with that obtained in the database of the Public Employment Services.

The results obtained are represented in the following graphs⁷:

Graph 4.5.a). SEPE job-seekers (15,874 persons)

83.65% of SEPE job-seekers (84.72% in 2017) who declare in EAPS whether or not they receive any type of unemployment benefit also appear in the same situation in SEPE.

On the other hand, 15.46% (14.62% in 2017) declare a different situation in the survey than that appearing in the SEPE database (table 6).

⁷ It does not include *Doesn't know/no answer* obtained as a response to the survey when asking the interviewee the question about the receipt of some type of unemployment benefit or subsidy. There are 140 people (0.88 of the total), 27 of whom appear receiving benefits according to SEPE

4.6 EXTENSION OF THE REFERENCE PERIOD: THREE MONTHS PRIOR TO THE REFERENCE WEEK. SAMPLE DATA. SECOND QUARTER OF 2019.

By extending the reference period in which the person is searched in the SEPE database to three months, the percentage of SEPE job-seekers found goes from 20.05% in 2017 to 17.99%. In 2019, the percentage of EAPS registered persons not included as job-seekers in SEPE increased slightly: from 13.54% in 2017 to 13.93%, according to the data in table 7.

5 Conclusions

After repeating the microdata analysis exercise with the information collected in the second quarter of 2019, the conclusions reached are basically the same as in previous periods, namely:

- 1) **There are discrepancies between the two sources of information regarding registration as a job-seeker in a public employment office.** Specifically, almost 76% of those registered as job-seekers according to EAPS are also included as such in SPES. In the opposite situation, there is a greater degree of coincidence: more than 96% of EAPS unregistered persons do not appear in SEPE (table 2.2).
- 2) By studying whether the short **reference period** considered (one week) also influences, **extending it to three months**, in order to contrast if the EAPS interviewees may be unconsciously referring to their situation in a longer period, **the difference with respect to the situation in the reference week is reduced**: in this case, 86.07% of those registered as job-seekers according to EAPS are also included as such in SPES.

It can therefore be said that the concept of job-seeker in both sources is reasonably similar and that the discrepancies observed when considering the reference week are due to the interviewee's unawareness of his administrative situation.

- 3) On the other hand, if we focus on the percentage (with respect to the total number of SEPE job-seekers) of people who claim to receive unemployment benefit, the degree of coincidence between the information collected by the survey and that recorded by SEPE is very similar, where 83.85% of the recipients of unemployment benefit according to EAPS, are recipients according to SEPE (table 6).
- 4) Again, it is noted that **EPA unemployment and registered unemployment are different concepts**: taking as a reference universe the registers of SEPE job-seekers (Graph 4.4.a), only for 59.52% of them (62.66% in 2017) the classification with respect to unemployment in the register and in the survey coincides (they are unemployed or not unemployed in both). The figure is consistent with the fact that the concept of job-seeker is essential and the

starting point for classification as a registered unemployed person whereas it is irrelevant for the purposes of the EAPS unemployment.

However, if we consider the group of people who are simultaneously EAPS and SEPE job-seekers, we observe that almost 81% of those classified as EAPS unemployed persons are also registered unemployed persons (table 5). This reflects the existing correlation between unemployment data published in the survey and registered unemployment and the consistency in their evolution over time.

Finally, it should be stressed that, although their temporal evolution is coherent and they have a similar denomination, **the direct comparison of the unemployment figures registered in the Public Employment Services and unemployment estimated by the Economically Active Population Survey is not possible**, since they correspond to different concepts and come from sources of a different nature. The micro analysis carried out in this document shows the extent to which the differences are substantial.

Porcentajes horizontales

	Total	Inscrito como demandante EPA	No inscrito como demandante EPA	No sabe / no contesta
TOTAL NO PARADOS EPA	100	60,29	38,52	1,19
No acaban en paro registrado	100	49,55	49,29	1,15
Acaban en paro registrado	100	68,54	30,24	1,22

Tabla 5. Demandantes EPA y SEPE de 16 a 74 años según si se clasifican como paro registrado y la relación con la actividad EPA (total, parados, no parados)

Segundo trimestre de 2019. Datos muestrales

Tabla 5.1 Valores absolutos

	Total	Parados EPA	No parados EPA
TOTAL DEMANDANTES EPA Y SEPE	11.970	6.557	5.413
No acaban en paro registrado	3.186	1.254	1.932
Acaban en paro registrado	8.784	5.303	3.481

Tabla 5.2 Porcentajes verticales

	Total	Parados EPA	No parados EPA
TOTAL DEMANDANTES EPA Y SEPE	100	100	100
No acaban en paro registrado	26,62	19,12	35,69
Acaban en paro registrado	73,38	80,88	64,31

Tabla 5.3 Porcentajes horizontales

	Total	Parados EPA	No parados EPA
TOTAL DEMANDANTES EPA Y SEPE	100	54,78	45,22
No acaban en paro registrado	100	39,36	60,64
Acaban en paro registrado	100	60,37	39,63

Tabla 6. Demandantes SEPE de 16 a 74 años según perciban o no prestación por desempleo

Segundo trimestre de 2019. Datos muestrales

Tabla 6.1 Valores absolutos

Total

	Valores absolutos	Percibe prestación según EPA	No percibe prestación según EPA	No sabe / no contesta
TOTAL	15.874	4.966	10.768	140
Percibe prestación según SEPE	5.844	4.164	1.653	27
No percibe prestación según SEPE	10.030	802	9.115	113

Tabla 6.2 Porcentajes verticales

Total

	Verticales	Percibe prestación según EPA	No percibe prestación según EPA	No sabe / no contesta EPA
TOTAL	100	100	100	100
Percibe prestación según SEPE	36,81	83,85	15,35	19,29
No percibe prestación según SEPE	63,19	16,15	84,65	80,71

Tabla 6.3 Porcentajes horizontales

Total

	Verticales	Percibe prestación según EPA	No percibe prestación según EPA	No sabe / no contesta EPA
TOTAL	100	31,28	67,83	0,88
Percibe prestación según SEPE	100	71,25	28,29	0,46
No percibe prestación según SEPE	100	8,00	90,88	1,13

Tabla 7. Clasificación de las personas de 16 a 74 años de la muestra según si figuran como demandantes en el SEPE (durante los últimos tres meses desde la semana de referencia EPA) y si están inscritos en una oficina pública de empleo según la EPA

Segundo trimestre de 2019. Datos muestrales

7.1 Valores absolutos

	Total	Inscrito como demandante EPA	No inscrito como demandante	No sabe / no contesta
TOTAL	120.160	15.765	103.664	731
Demandante SEPE (3 meses)	21.611	13.569	7.822	220
No demandante SEPE (3 meses)	98.549	2.196	95.842	511

7.2 Porcentajes verticales

	Total	Inscrito como demandante EPA	No inscrito como demandante	No sabe / no contesta
TOTAL	100	100	100	100
Demandante SEPE (3 meses)	17,99	86,07	7,55	30,10
No demandante SEPE (3 meses)	82,01	13,93	92,45	69,90

7.3 Porcentajes horizontales

	Total	Inscrito como demandante EPA	No inscrito como demandante	No sabe / no contesta
TOTAL	100	13,12	86,27	0,61
Demandante SEPE (3 meses)	100	62,79	36,19	1,02
No demandante SEPE (3 meses)	100	2,23	97,25	0,52

Tabla 8. Clasificación de las personas de 16 a 74 años de la muestra según la relación con la actividad EPA, la inscripción en una oficina pública de empleo según la EPA y la situación encontrada en el SEPE

Segundo trimestre de 2019. Datos muestrales
