Methodological note

The Tourism survey for Spanish residents (ETR/FAMILITUR) is a continuous survey with the main objective to provide monthly, quarterly and annual estimations of the trips made by the resident population in Spain and the main characteristics such as destination, duration, reason, accommodation, transport means, costs and sociodemographic characteristics of the travellers, amongst others. The diffusion of results and their disaggregation degree, depending on the study variable group, will be made with monthly, quarterly or annual reference.

The information is obtained by personal interviews to people aged 15 or older, selected at random in a sample of resident houses, that collaborate three times in alternative months along six months, leave the sample for six months, and are interviewed three other times during the next semester. People selected provide information on the trips made in the two months prior to that of the interview. With an expected effective monthly sample of about 8,200 people, the information of a reference month is provided by about 16,400 people. Furthermore, the rotating panel scheme provides the efficient estimation of the annual change.

The full methodology of the survey can be reviewed in the web page of the INE⁵.
