1. Presentation

This publication presents the results corresponding to the tourist campsites occupancy survey.

The most important information from the survey is offered monthly, in accordance with the dissemination regulations of the Institute.

The data provided give notice of the two aspects considered when analysing tourist trends: as regards the demand, information is included on travellers, overnight stays and average stay distributed by country of residence of the travellers and category of the accommodations they occupy or the Autonomous Community they are from in the case of Spanish travellers, alongside information on the total number of occupied lots distributed per accommodation category. As regards the supply, information includes the estimated number of establishments open for the season, estimated number of vacancies, estimated number of pitches, level of occupancy and information on employment in the sector, in terms of the category of the establishment.

This information is presented monthly on a national basis and in the autonomous communities and provinces with the highest number of overnight stays, as well as in the holiday areas that receive the greatest inflow of visitors over the year.

The National Statistics Institute thanks all professionals, businesspersons and institutions related to the tourist sector, for the collaboration provided that has been essential when carrying out this survey.

2. Objectives

The main objective of the Campsite Occupancy Survey is to ascertain the behaviour of a series of variables which allow us to describe the segment occupied by this type pf accommodation within the tourist sector, both from a supply as well as a demand point of view.

3. Statistical unit

The analysis units are all campsite establishments registered as such in the corresponding Tourist Office Register of each Autonomous Community.

Tourist campsites, also called "Campings", are understood to be those land spaces which are duly delimited, equipped and conditioned, destined to habitually provide people, after the payment of a stipulated price, with a place to live outdoors for a limited period of time for holiday or tourism purposes, and using as a residence mobile homes, caravans, tents or other similar easily transportable elements.

Tourist campsites are classified, in accordance with their installations and the services offered, into the following four categories: luxury, first-class, second-class and third-class.

4. Scope of the Survey

Se investigan todos los establecimientos del territorio nacional, con la excepción de Ceuta y Melilla.

5. Definition of Variables

5.1 Estimated open establishments

The number of establishments open for the season as estimated by the survey.

An establishment open for the season is that establishment in which the reference month is included within its opening period.

5.2 Estimated vacancies

Number of vacancies estimated by the survey of the establishments open for the season.

For campings the number of vacancies corresponds with the authorised capacity of persons.

5.3 Estimated pitches

The total number of estimated pitches in a camping is defined as the sum of:

- estimated pitches
- bungalows estimados
- occupied caravans owned by the campsite
- la zona no parcelada destinada a la acampada libre estimada

de los establecimientos abiertos de temporada.

A pitch is defined as the surface area, numbered and perfectly delimited, destined to camping.

A bungalow is defined as a fixed construction within the campsite destined as an accommodation unit.

An owned caravan of the campsite is defined as a mobile accommodation unit the use of which is rented out for a stipulated price.

The undivided area is a section of the campsite where free camping is allowed.

5.4 Travellers checked in

All persons who stay one or more consecutive nights in the same accommodation.

Travellers are classified by their country of residence, and people residing in Spain are classified by the Autonomous Community they usually live in.

5.5 Overnight stays or occupied vacancies

An overnight stay is understood to be every night that a traveller stays in the establishment. As occurs with the checking in of travellers, occupied vacancies are broken down according to place of residence.

5.6 Average Stay

This variable is an approximation to the number of days which, on average, the travellers stay at the campsite, and is calculated as the quotient between the overnight stays and the number of travellers.

5.7 Total number of occupied pitches

Understood as the sum of: occupied pitches plus occupied bungalows plus occupied caravans owned by the campsite plus the occupied undivided area.

5.8 Level of occupancy by pitches

The level of occupancy by pitches is understood as the percentage-based relation between the total number of pitches occupied during the month and those available on the campsite during the same period multiplied by the days in the reference month.

5.9 Level of occupancy of pitches on weekends

Percentage-based relation between the number of pitches occupied on Friday and Saturday in the reference week and the total number of pitches, multiplied by the number of days analysed, in this case two.

5.10 Occupied personnel

Defined as the group of people, remunerated and not remunerated, who contribute with their work to the production of goods and services during the reference period of the survey, even when they work outside the premises.

5.11 Holiday area

Group of municipalities where tourist inflow is specifically located. Information is presented on the areas that attract the greatest amount of tourists.

6. Survey framework and sample design

As the framework for the selection of the informant units, the survey uses the directories of the Tourist Offices of the Autonomous Communities and other sources, which include, in those that appear, amongst other data, the following information for each establishment: name, address, normal opening period, category of the establishment, number of vacancies, number of pitches, bungalows.

These directories are updated on a permanent basis.

The survey is exhaustive in all the provinces, except in Ceuta and Melilla, where the survey is not performed because of the non existence of this type of establishments.

7. Estimators

ESTIMATORS IN CAMPSITES

VARIABLES USED:

E = number of campsites open during the month, existing in the directory

e' = number of establishments that answer the monthly survey (questionnaires that have been completed and questionnaires received blank)

e' = number of establishments that answer the monthly survey (questionnaires that have been completed and questionnaires received blank)

c = number of tourist campsites from the sample that are closed within their opening period (during the reference week)

c' = number of tourist campsites that are closed during their opening period (reference month)

P = number of vacancies according to the directory

p = number of vacancies per pitch

V = number of travellers checked in

VM = number of travellers checked in during the whole month

N = number of occupied vacancies (overnight stays)

NM = number of occupied vacancies (overnight stays) during the whole month

T = employed personnel

dm = number of days the establishment has been open during the reference month

ES = average stay

GP = level of occupancy by vacancies

D = number of days of the reference month (28, 29, 30, 31)

RP = number of pitches according to the directory

RB = number of bungalows according to directory

RC = number of owned caravans according to the directory

RS = number of vacancies in undivided areas according to the directory

RT = total number of pitches

QP= number of occupied pitches (QP= QP1+QP2)

QM = number of occupied pitches (total) during the whole month

QP1 = pitches occupied under a long-term rent scheme

QP2 = rest of occupied pitches

QB= number of occupied bungalows

QC= number of owned caravans

QS = number of occupied vacancies in undivided areas

QT = total number of occupied pitches

Level of occupation by pitches

For the group of categories:

$$\hat{GR}*_j = \frac{\sum_k \hat{GR}*_{jk} \cdot \hat{RM}_{jk}}{\sum_k \hat{RM}_{jk}}$$

Level of occupancy by pitches at weekends

$$\hat{GR}^{fs}_{jk} = \frac{\sum_{i=1}^{e_{jk}} QT^{fs}_{ijk}}{2\sum_{i=1}^{e_{jk}} RT_{ijk}} \cdot 100$$

$$QT^{fs}_{ijk} = QP^{fs}_{ijk} + QB^{fs}_{ijk} + QC^{fs}_{ijk} + \frac{QS^{fs}_{ijk}}{p_{ijk}}$$

For the set of categories

$$\hat{GR}^{fs}_{j} = \frac{\sum_{k} \hat{GR}^{fs}_{jk} . \hat{RT}_{jk}}{\sum_{k} \hat{RT}_{jk}}$$

Estimate of employed personnel

$$\hat{T}*_{jkm} = \sum_{i=1}^{e_{jk}} T_{ijkm} \cdot \frac{\hat{PM}_{jk}}{\sum_{i=1}^{e_{jk}} P_{ijk}}$$

Methodological note

As from January 2003, the information published regarding variables for travellers, overnight stays and occupied pitches stems from a new estimate that considers the total occupancy in each establishment during the month analysed. Previously, estimates were performed using data supplied by each establishment for a specific week of the month, so that there was information on every week. In these, and in the other variables, the number of days each establishment has been open during the month in question is also considered.

The variation rate for each variable has been calculated using the same estimation methodology for the two years compared.

8. Collection of the information

The enquiry pertaining to basic data refers to one week of the month, randomly selected, in such a way that among all the establishments the whole month is covered.

Since January 2003, a second enquiry is performed regarding monthly totals; total number of travellers, overnight stays and pitches occupied during the whole month, alongside the number of days the establishment has been open during the reference month.

The information published for each variable -travellers, overnight stays and occupied pitches- is estimated on the basis of the data provided in the monthly module.

The questionnaires are received from the Campings at the Provincial Delegations of the INE, where they are filtered and the data is recorded.

Subsequently, they are forwarded to the central offices of the INE where a second filter is performed and the tables are elaborated and the comments drafted, which are published monthly, in accordance with the Availability Calendar of Short-term Statistics of the INE.

9. Dissemination of the information

The information is presented on different levels of geographical breakdown: national, Autonomous Community, provincial, tourist area and tourist site. The areas (groups of municipalities) have been considered, as well as the municipalities in which tourist affluence is specifically located.

10. Variation coefficients

Sampling errors calculation of the following monthly variables:

$$\hat{VM}_{jk} \quad ; \quad \hat{NM}_{jk} \quad \text{in both cases "without dm" and "with dm".}$$

Where:

   a) Travellers checked in (V for the weekly questionnaire and VM for the monthly one)
   b) Occupied vacancies (Overnight stays) (N for the weekly questionnaire and NM for the monthly one)

Being $\hat{Y}_{jkm}$ the estimator of any of this variables (see Estimation document). The estimation of the sampling (in percentage) relative error (%) will be calculated for each month as follows:

$$\hat{E}\left(\hat{Y}\right)=\frac{\sqrt{\hat{V}_{ar}\left(\hat{Y}\right)}}{\hat{Y}}.100 \; ; \; \hat{E}\left(\hat{Y}_j\right)=\frac{\sqrt{\hat{V}_{ar}\left(\hat{Y}_j\right)}}{\hat{Y}_j}.100 \; ; \; \hat{E}\left(\hat{Y}_{jk}\right)=\frac{\sqrt{\hat{V}_{ar}\left(\hat{Y}_{jk}\right)}}{\hat{Y}_{jk}}.100$$

in order to estimate the coefficients of variation of travallers and total overnight stays. In order to calculate the coeffient of residents and non residents it will be used:

$$\hat{E}\left(\hat{Y}_m\right)=\frac{\sqrt{\hat{V}_{ar}\left(\hat{Y}_m\right)}}{\hat{Y}_m}.100 \qquad \text{where m = modality (residents or non residents)}$$

where:

$$\hat{V}_{ar}\left(\hat{Y}\right)=\sum_j\hat{V}_{ar}\left(\hat{Y}_j\right) \; ; \; \hat{V}_{ar}\left(\hat{Y}_j\right)=\sum_k\hat{V}_{ar}\left(\hat{Y}_{jk}\right) \; ; \; \hat{V}_{ar}\left(\hat{Y}_{jk}\right)=\sum_m\hat{V}_{ar}\left(\hat{Y}_{jkm}\right)$$

$$\hat{V}_{ar}\left(\hat{Y}_m\right)=\sum_j\sum_k\hat{V}_{ar}\left(\hat{Y}_{jkm}\right)$$

and $\hat{V}_{ar}\left(\hat{Y}_{jkm}\right)$ **will be calculated as follows:**

A) **Group A estiomators: Weekly information.** without dm

For Y = V (travellers) or N (overnight stays)

$$\hat{V}_{ar}\left(\hat{Y}_{jkm}\right) = (1 - f_{jk}) \cdot \frac{e_{jk}}{\left(e_{jk}\right) - 1} \cdot \frac{\hat{P}_{jk}^{2}}{\left(\sum_{i=1}^{e_{jk}} P_{ijk}\right)^{2}} \cdot \sum_{s} \left(Y_{ijkm} - \hat{R}_{jkm}\ P_{ijk}\right)^{2}$$

where

$$f_{jk} = \frac{e_{jk} + c_{jk}}{E_{jk}}$$

and s = e , therefore:

$$Y_{ijkm} = \langle \qquad Y_{ijkm} \cdot \frac{D}{7} \qquad \text{if}\ \ i \in e$$

$$\hat{R}_{jkm} = \frac{\sum_{i=1}^{e_{jk}} Y_{ijkm} \cdot \frac{D}{7}}{\sum_{i=1}^{e_{jk}} P_{ijk}}$$

B) **Group B estimators: Weekly information.** with dm

For Y = VM (travellers) or NM (overnight stays)

$$\hat{V}_{ar}\left(\hat{Y}_{jkm}\right) = (1 - f'_{jk}) \cdot \frac{e'_{jk}}{\left(e'_{jk}\right) - 1} \cdot \frac{P\hat{M}^2_{jk}}{\left(\sum_{i=1}^{e'_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D}\right)^2} \cdot \sum_{s} \left(Y_{ijkm} - \hat{R}_{jkm} \ P_{ijk}\right)^2$$

where

$$f_{jk} = \frac{e'_{jk} + c'_{jk}}{E_{jk}}$$

and s = e' , therefore:

$$Y_{ijkm} = \langle \qquad YM_{ijkm} \qquad \text{if } i \in e'$$

$$\hat{R}_{jkm} = \frac{\sum_{i=1}^{e'_{jk}} YM_{ijkm}}{\sum_{i=1}^{e'_{jk}} P_{ijk}}$$

11. Secrecy and statistical significance

There must be, at least, 3 establishments in the sample with incidence 1 (in the monthly module).
