1. Presentation

This publication presents the results corresponding to the Rural Tourist Accommodation Occupancy Survey.

The most important information from the survey is offered monthly, in accordance with the dissemination regulations of the INE.

The data provided give notice of the two aspects considered when analysing tourist trends: with regards to demand, there is information on travellers, overnight stays and average stay residence of travellers by autonomous community of origin in the case of Spanish travellers; in terms of supply, the information includes the estimated number of establishments open for the season, estimated number of bedplaces, estimated number of bedrooms, occupancy rate and information on employment in the sector.

This information is presented monthly on a national basis as well as by autonomous communities, provinces, areas and sites with the highest number of overnight stays.

The National Statistics Institute thanks all professionals, businesspersons and institutions related to the tourist sector, for the collaboration provided that has been essential when carrying out this survey.

2. Objectives

The main objective of the Tourist Accommodation Occupancy Survey (Rural Tourism Accommodations) is to ascertain the behaviour of a series of variables which allow us to describe the basic characteristics of this type of accommodation within the tourist sector, both from a supply and demand points of view, so that the need for knowledge regarding this sector by national organisations and the requirements of international organisations are thus addressed.

3. Statistical unit

These are all Rural Tourism Accommodation Establishments, registered as such in the corresponding register from each Autonomous Community, in accordance with the definitions which for said accommodations appear in the different Autonomous Community regulations.

Rural Tourism Accommodation Establishments are those establishments or dwellings destined for tourist lodging in exchange for a price with or without any other complementary services which are registered in the corresponding **Register** of each Autonomous Community. These establishments usually present a determined set of characteristics:

- a) They are located in a **rural environment**.
- b) They are constructions with a common **architectonic style that is characteristic of the area** or which are located in land properties which maintain active livestock and farming operations (agrotourism).
- c) They offer a limited number of vacancies and rooms for the accommodation of guests and comply with certain infrastructure and basic services requirements.

Rural tourism accommodation establishments may adopt one of these two rent modalities, or both:

- the complete-use rent modality is described as the complete hiring of the property for the exclusive use of the contractor,
- the shared-use rent modality is defined as the individualised hiring of bedrooms within the family dwelling itself.

4. Scope of the Survey

All establishments and/or companies operating in the country are researched.

With the exception of Ceuta and Melilla, where there are no establishments of this type.

5. Definition of Variables

5.1 Estimated open rural tourism housing accommodations.

Number of seasonally opened rural tourism accommodation estimated by the survey. Seasonally opened rural tourism accommodation are those where the month of reference is included within their opening period.

5.2 Estimated capacity of a Rural Tourism accommodation

Estimated capacity by the survey on seasonally opened rural tourism accommodations

The bedplaces of a rural tourism accommodation establishment are understood to be the number of fixed beds available in it; extra beds therefore are not included and double beds equal two bed-places

5.3 Traveller

All persons who stay one or more consecutive nights in the same accommodation.

Travellers are classified by their place of residence. In the case of Spaniards, information is requested on the Autonomous Community of origin.

5.4 Overnight stay

An overnight stay is understood to be each night that a traveller stays in the rural tourism establishment.

For example, a married couple with an offspring in a supplementary bed, will be counted as an occupied room and three overnight stays or occupied beds.

5.5 Average Stay

This variable is an approximation of the number of days which, on average, travellers stay at the rural tourism accommodation and is calculated as the quotient between overnight stays and the number of travellers.

5.6 Occupancy rate by bed-places

Percentage-based relation between the number of overnight stays and the capacity by the days the overnight stays refer to plus the number of supplementary beds used.

It can be deduced from this definition that an rural tourist accommodation may have a degree of occupation of less than 100% and however not have any vacancies, as an accommodation or a room or double-bed may be occupied only by a person being accounted for as an overnight stay. However, the apartment may have a greater capacity.

5.7 Level of occupation by weekend capacity

Relationship, as a percentage, between the total number of overnight stays and the product of the bedplaces, by the two days to which the overnight stays refer (Friday and Saturday), including supplementary beds.

It can be deduced from this definition that an rural tourist accommodation may have a degree of occupation of less than 100% and however not have any vacancies, as an accommodation or a room or double-bed may be occupied only by a person being accounted for as an overnight stay. However, the apartment may have a greater capacity.

5.8 Supplementary beds

Supplementary beds are those that do not have a fixed nature and are not included in the bed-places declared officially by the establishment but do appear in the directory.

Furniture installed permanently in the rural tourism accommodation (sofa bed, foldaway bed, etc.) is only considered a supplementary bed when used as such.

Cots will also be considered as extra beds.

5.9 Level of occupancy by rooms

It is the relationship, the percentage, between the daily average number of rooms and the total number of rooms of the sample in the same period.

5.10 Occupied personnel

Defined as the group of people, remunerated and not remunerated, who contribute with their work to the production of goods and services during the reference period of the survey, even when they work outside the premises.

6. Survey framework and sample design

As the framework for the selection of the informant units, the survey uses the directories of the Tourist Offices of the Autonomous Communities, which include, amongst other data, the following information: name, address, normal opening period, number of bed-places, number of holiday apartments and category in some cases.

The survey is exhaustive in all provinces, except in some modalities, for the provinces detailed hereunder:

	Provinces	Active tourism	Youth Hostels, shelters and rural campsites	Rural holiday dwellings	Country cottages	Large buildings	Hotels	Other

7. Estimators

VARIABLES USED:

E = number of establishments open during the month, existing in the directory
e = number of establishments that respond to the survey using the customary method to the monthly questionnaire (incidence = 1 or 2)
e'' = number of establishments that respond to the survey by sending the XML file
c = number of establishments in the sample that state that they are closed in the monthly questionnaire (incidence = 3)
dm = number of days that the establishment has been open during the reference month
D = number of days of the reference month (28, 29, 30 or 31)
P = number of bedplaces of open establishments according to the directory
V = number of travellers checked in
N = number of occupied bedplaces or overnight stays
N' = number of occupied supplementary bedplaces
D^{fs} = total number of Fridays and Saturdays in the reference month
ES = average stay
T = employed personnel
H = number of bedrooms of open establishments according to the directory
B = nº de habitaciones ocupadas (cuando la modalidad de alquiler no es de uso completo)
BC = nº de habitaciones ocupadas (cuando la modalidad de alquiler no es de uso compartido)
BT = nº total de habitaciones ocupadas
A = number of independent accommodations of open establishments according to the directory
AB = number of occupied independent accommodations
GP = occupancy rate by bedplaces
GH = occupancy rate by bedroom

SUBINDICES USED:

i = establishment
j = province
k = accommodation modality (rural hotel, rural holiday dwelling, cottage, rural campsite, rural hostel, active tourism, large buildings, other)
m = modality (place of residence, professional status)

Monthly information plus XML (for all strata)

Number of establishments open in the reference month:

$$\hat{E}_{jk} = E_{jk} \frac{\left(\sum_{i=1}^{e_{jk}} \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} \frac{dm_{ijk}}{D} \right)}{(e_{jk} + e''_{jk}) + c_{jk}}$$

Number of bedplaces in the establishments open during the reference month

$$\hat{P}_{jk} = \sum_{i=1}^{E_{jk}} P_{ijk} \cdot \frac{\left(\sum_{i=1}^{e_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} + \sum_{i=1}^{e''_{jk}} P_{ijk} \right) + \sum_{i=1}^{c_{jk}} P_{ijk}}$$

Number of travellers checked in during the month

$$\hat{V}_{jkm} = \left[\sum_{i=1}^{e_{jk}} V_{ijkm} + \sum_{i=1}^{e''_{jk}} V_{ijkm} \right] \cdot \frac{\hat{P}_{jk}}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}$$

Note: in $\sum_{i=1}^{e''_{jk}} V_{ijkm}$ m will have to be adjusted to the listing of places of origin in the print questionnaire.

Number of occupied bedplaces (overnight stays)

$$\hat{N}_{jkm} = \left[\sum_{i=1}^{e_{jk}} N_{ijkm} + \sum_{i=1}^{e''_{jk}} N_{ijkm} \right] \cdot \frac{\hat{P}_{jk}}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}$$

Note: in $\sum_{i=1}^{e''} N_{ijk m}$ m will have to be adjusted to the listing of places of origin in the print questionnaire.

Number of occupied supplementary bedplaces

$$\hat{N}'_{jk} = \left[\sum_{i=1}^{e_{jk}} N'_{ijk} + \sum_{i=1}^{e''_{jk}} N'_{ijk} \right] \cdot \frac{\hat{P}_{jk}}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}$$

Number of weekend overnight stays

$$\hat{N}^{fs}_{jk} = \left[\sum_{i=1}^{e_{jk}} N^{fs}_{ijk} + \sum_{i=1}^{e''_{jk}} N^{fs}_{ijk} \right] \cdot \frac{\hat{P}_{jk}}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}$$

Note: since the information related to the number of weekend occupied supplementary bedplaces (N'^{fs}_{ijk}), is not taken into account in the questionnaire, the following hypothesis is applied:

$$\frac{N'_{ijk}}{N_{ijk}} = \frac{N'^{fs}_{ijk}}{N^{fs}_{ijk}} \Rightarrow N'^{fs}_{ijk} = N^{fs}_{ijk} \cdot \frac{N'_{ijk}}{N_{ijk}}$$

Number of weekend occupied supplementary bedplaces

$$\hat{N}'^{fs}_{jk} = \left[\left(\sum_{i=1}^{e_{jk}} N'^{fs}_{ijk} \cdot \frac{D^{fs}}{2} \right) + \sum_{i=1}^{e''_{jk}} N'^{fs}_{ijk} \right] \cdot \frac{\hat{P}_{jk}}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} + \sum_{i=1}^{e''_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}$$

Average stay per modality

$$ES_{jk} = \frac{\sum_m \hat{N}_{jkm}}{\sum_m \hat{V}_{jkm}}$$

Average stay per country of residence

$$ES_{jm} = \frac{\sum_k \hat{N}_{jkm}}{\sum_k \hat{V}_{jkm}}$$

Employed personnel

$$\hat{T}_{jkm} = \left(\sum_{i=1}^{e_{jk}} T_{ijkm} + \sum_{i=1}^{e''_{jk}} T_{ijkm} \right) \cdot \frac{\hat{P}_{jk}}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} P_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}$$

Bedrooms existing in open establishments

The total number of bedrooms of an establishment is defined as follows:

$$H_{ijk} = \begin{cases} H_{ijk} & \text{if the number of bedrooms in the establishment is known} \\ P_{ijk}/2 & \text{if the number of bedrooms in the establishment is unknown} \end{cases}$$

$$\hat{H}_{jk} = \sum_{i=1}^{E_{jk}} H_{ijk} \cdot \frac{\left(\sum_{i=1}^{e_{jk}} H_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} H_{ijk} \cdot \frac{dm_{ijk}}{D} \right)}{\left(\sum_{i=1}^{e_{jk}} H_{ijk} + \sum_{i=1}^{e''_{jk}} H_{ijk} \right) + \sum_{i=1}^c H_{ijk}}$$

Occupied bedrooms in establishments that have not had only occupancy in complete-use rent modality

$$\hat{B}_{jk} = \left[\sum_{i=1}^{e_{jk}} B_{ijk} + \sum_{i=1}^{e''_{jk}} B_{ijk} \right] \cdot \frac{\hat{H}_{jk}}{\sum_{i=1}^{e_{jk}} H_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} H_{ijk} \cdot \frac{dm_{ijk}}{D}}$$

Note: B_{ijk} does not consider those establishments that have only had occupancy in complete-use rent modality.

Occupied independent accommodations and occupied bedrooms of establishments that have not only had occupancy in complete-use modality

$$\widehat{BC}_{jk} = \left(\sum_{i=1}^{e_{jk}} AB_{ijk} \cdot \frac{H_{ijk}}{A_{ijk}} + \sum_{i=1}^{e''_{jk}} AB_{ijk} \cdot \frac{H_{ijk}}{A_{ijk}} \right) \cdot \frac{\widehat{H}_{jk}}{\sum_{i=1}^{e_{jk}} H_{ijk} \cdot \frac{dm_{ijk}}{D} + \sum_{i=1}^{e''_{jk}} H_{ijk} \cdot \frac{dm_{ijk}}{D}}$$

Total occupied bedrooms

$$\widehat{BT}_{jk} = \widehat{B}_{jk} + \widehat{BC}_{jk}$$

Occupancy rate by bedplaces

$$\widehat{GP}_{jk} = \frac{\widehat{N}_{jk}}{D \cdot \widehat{P}_{jk} + \widehat{N}'_{jk}} \cdot 100$$

For all the modalities

$$\widehat{GP}_j = \frac{\sum_k \widehat{GP}_{jk} \cdot \widehat{P}_{jk}}{\sum_k \widehat{P}_{jk}}$$

Weekend occupancy rate by bedplaces

$$\widehat{GP}^{fs}_{jk} = \frac{\widehat{N}^{fs}_{jk}}{D^{fs} \cdot \widehat{P}_{jk} + \widehat{N}'^{fs}_{jk}} \cdot 100$$

For all the modalities

$$\hat{GP}_{fsj} = \frac{\sum_k \hat{GP}_{fsjk} \cdot \hat{P}_{jk}}{\sum_k \hat{P}_{jk}}$$

Occupancy rate by bedroom

$$\hat{GH}_{jk} = \frac{B\hat{T}_{jk}}{D \cdot \hat{H}_{jk}} \cdot 100$$

For all the modalities

$$\hat{GH}_j = \frac{\sum_k \hat{GH}_{jk} \cdot \hat{H}_{jk}}{\sum_k \hat{H}_{jk}}$$

8. Collection of the information

The basic data of the tourist or rural accommodation refer to one month.

The information is provided monthly by rural tourism ESTABLISHMENTS establishments, via a questionnaire which is forwarded to the National Statistics Institute. Likewise, it is possible to submit the information telematically or by uploading an XML file or over an Internet connection by means of the . system, by completing the questionnaire directly on-screen.

9. Dissemination of the information

The information is presented on different levels of geographical breakdown: national, Autonomous Community, provincial, tourist area and tourist site.

The areas (groups of municipalities) have been considered, as well as the municipalities in which tourist affluence is specifically located.

10. Variation coefficients

Calculation of sampling errors of the following monthly variables:

$$\hat{V}_{jk} \quad ; \quad \hat{N}_{jk} \quad .$$

Where:

- a) Travellers checked in (V for the actual questionnaire and XML)
- b) Occupied bedplaces (Overnight stays) (N for the monthly questionnaire and XML)

Where \hat{Y}_{jkm} is the estimator of any of the variables (see Estimation document).

The relative estimation error (%) of the sampling (in percentage) will be calculated for each month as follows:

$$\hat{E}(\hat{Y}) = \frac{\sqrt{\hat{V}_{ar}(\hat{Y})}}{\hat{Y}} \cdot 100; \quad \hat{E}(\hat{Y}_j) = \frac{\sqrt{\hat{V}_{ar}(\hat{Y}_j)}}{\hat{Y}_j} \cdot 100; \quad \hat{E}(\hat{Y}_{jk}) = \frac{\sqrt{\hat{V}_{ar}(\hat{Y}_{jk})}}{\hat{Y}_{jk}} \cdot 100$$

in order to estimate the variation coefficients of travellers and total overnight stays.

In order to calculate the residents and non residents coefficients it will be used:

$$\hat{E}(\hat{Y}_m) = \frac{\sqrt{\hat{V}_{ar}(\hat{Y}_m)}}{\hat{Y}_m} \cdot 100 \quad \text{where } m = \text{modality (residents or non residents)}$$

where:

$$\hat{V}_{ar}(\hat{Y}) = \sum_j \hat{V}_{ar}(\hat{Y}_j); \quad \hat{V}_{ar}(\hat{Y}_j) = \sum_k \hat{V}_{ar}(\hat{Y}_{jk}); \quad \hat{V}_{ar}(\hat{Y}_{jk}) = \sum_m \hat{V}_{ar}(\hat{Y}_{jkm})$$

$$\hat{V}_{ar}(\hat{Y}_m) = \sum_j \sum_k \hat{V}_{ar}(\hat{Y}_{jkm})$$

and $\hat{V}_{ar}(\hat{Y}_{jkm})$ will be calculated as follows:

Estimators with monthly information plus XML.

For Y = V (travellers) or N (overnight stays)

$$\hat{V}_{ar} \left(\hat{Y}_{jkm} \right) = (1 - f_{jk}) \cdot \frac{e_{jk} + e_{jk}''}{(e_{jk} + e_{jk}'') - 1} \cdot \frac{\hat{P}_{jk}^2}{\left(\sum_{i=1}^{e_{jk}} P_{ijk} \cdot \frac{dm}{D} + \sum_{i=1}^{e_{jk}''} P_{ijk} \cdot \frac{dm}{D} \right)^2} \cdot \sum_s \left(Y_{ijkm} - \hat{R}_{jkm} P_{ijk} \right)^2$$

where

$$f_{jk} = \frac{e_{jk} + e_{jk}'' + c_{jk}}{E_{jk}}$$

and $s = e + e''$, therefore:

$$Y_{ijkm} = \begin{cases} Y_{ijkm} & \text{if } i \in e'' \\ Y_{ijkm} & \text{if } i \in e \end{cases}$$

$$\hat{R}_{jkm} = \frac{\sum_{i=1}^{e_{jk}} Y_{ijkm} + \sum_{i=1}^{e_{jk}''} Y_{ijkm}}{\sum_{i=1}^{e_{jk}} P_{ijk} + \sum_{i=1}^{e_{jk}''} P_{ijk}}$$

11. Secrecy and statistical significance

Statistical secrecy regulations

It may be provided information related to all the strata (data geographical groups) where the number of establishments with incidence 1 (open with movement) is equal to or greater than 3 may be provided.

RECOMMENDATIONS OF STATISTICAL SIGNIFICANCE

Results of the main estimated variables by the surveys are statistically significant if the following conditions are fulfilled within the domain of which the information is provided:

There must be, at least, 8 establishments in the sample with incidences 1 (with data) or 2 (without movement), of which at least 3 of them will have incidence 1.

12. Linking coefficients

The methodological changes or extraordinary updates of the directories used in the framework of the survey imply that the data published introducing said changes is not directly comparable with the previously published data.

In order to avoid this break in the series, and allow for comparability, linking coefficients are calculated to be applied to the published data before introducing the improvements.

Linking coefficients

Given the strong seasonal nature of these series, we have decided to obtain different linking coefficients for each month, thus maintaining the interannual variation rates of the series, although the same does not apply to the inter-monthly rates.

For each month, the linking coefficient for a variable X is obtained as the quotient between the estimated value of said variable in said month of year T, considering all of the available information (methodological changes and/or improvements in the directory) and the estimated value in the same month without considering the innovations.

$$CX_{i,T} = \frac{X_{i,T}^{conmejoras}}{X_{i,T}^{sin mejoras}}$$

where:

$i = 1 \dots 12$ months

$X_{i,T}^{conmejoras}$ = Estimated value of variable X in month i del año T utilizando toda la información disponible.

$X_{i,T}^{sin mejoras}$ = Estimated value of variable X in month i del año T sin tener en cuenta las novedades.

Linked series

The series that are linked and comparable with the data published are calculated by multiplying the published series (prior to the date on which the improvements are introduced) by the linking coefficient of the corresponding month.

$$X_{i,T-j}^{enlazada} = X_{i,T-j}^{pub} \times CX_{i,T}$$

where:

$i = 1 \dots 12$ months

$X_{i,T-j}^{pub}$ = Published estimated value of variable X in month i del año $T - j$

(where $j \succ 0$)

$CX_{i,T}$ = Linking coefficient for variable X in month i

Given that the linking coefficients are calculated independently for each geographical breakdown, each category or each nationality, the linked series lose their additivity.
