

28 November 2014

(Update at 10 December 2014)

Labour and Geographical Mobility Statistics (LGMS)

Year 2014

(Labour information for the first quarter of each year, combined with the information from the latest recorded municipal register movement)

Main results

- Geographical mobility of employed persons increases as compared to last year. 2.5% of employed persons in the first quarter of 2014 have changed municipality of residence in the past year. This figure is higher than that recorded in 2013 (2.3%), interrupting the decreasing trend registered since 2010.
- One in three employed persons have not changed municipality of residence since birth. The highest percentage of mobility is recorded within the same province.
- The type of contract influences wage earners mobility. 4.1% of wage earners with a temporary contract have changed their residence municipality in the last year, as compared to 2.2% of those with a permanent contract.
- Geographical mobility of unemployed persons has not recorded significant changes. 4.1% of unemployed persons have changed their residence municipality in the last year. This percentage is similar to that of 2013.
- 32.8% of unemployed persons have not changed municipality of residence since birth.
- Age and nationality are the variables with most influence on geographical mobility, both for employed and unemployed persons. Mobility is much higher among foreign nationals and young persons.
- The Autonomous Communities with the greatest geographical mobility as a percentage of employed persons who have changed their residence municipality in the last year are Illes Balears (3.3%), Cataluña (3.2%) and Castilla-La Mancha (3.2%). The Autonomous Communities with the lowest geographical mobility as a percentage of unemployed people who have not changed municipality since at least five years are Andalucía (87.6%), Extremadura (87.4%) and Región de Murcia (85.8%).

The Labour and Geographical Mobility Survey is a statistical operation that takes the sample from the Economically Active Population Survey (EAPS) for the first quarter of the year as its foundation, and includes information from the latest movements in the Municipal Register that imply changes of residence to another municipality.

This additional information enables observing the different behaviour, with regard to the labour market, based on the time that the person has been registered in their current

residence, and on the geographical characteristics of their current municipality of residence, and as pertinent, their previous residence.

Results have been obtained for the 2010-2014 period. In all cases, the data regarding labour activity is obtained in the EAPS for the first quarter of the corresponding year.

The results have been calculated on the basis of the new base of the Population and Dwelling Census 2011, after reviewing those of the 2010-2013 period in order to add them to that base.

Mobility of employed persons

Geographical mobility of employed persons has decreased steadily since 2010. Nevertheless, in 2014 the trend changed and we observed an increase of the percentage of employed persons who had changed their residence municipality within the last year, as compared to the previous year (from 2.3% to 2.5%).

Percentage of employed persons who changed municipality of residence less than one year ago

In absolute terms, 419,500 out of 16,950,600 employed persons in the first quarter of 2014 had been living in the current municipality for less than one year. In turn, 14,386,300 employed persons (84.9% of the total) had resided in the same municipality for five years or more.

One out of three employed persons had not changed municipality of residence since birth. For 38.6%, the previous municipality of residence was in the same province, 4.2% came from another province in the same Autonomous Community, 15.0% from another Autonomous Community and 8.4% from another country.

Mobility of employed persons, by location of the previous municipality of residence and time of residence in the current municipality

Year 2014	Time of residence in the current municipality

Mobility of unemployed persons

The mobility of unemployed persons had decreased continuously during the period from 2010 to 2013. In 2014, the percentage of unemployed people who changed their residence municipality in the last year was the same than that recorded in 2013 (4.1%).

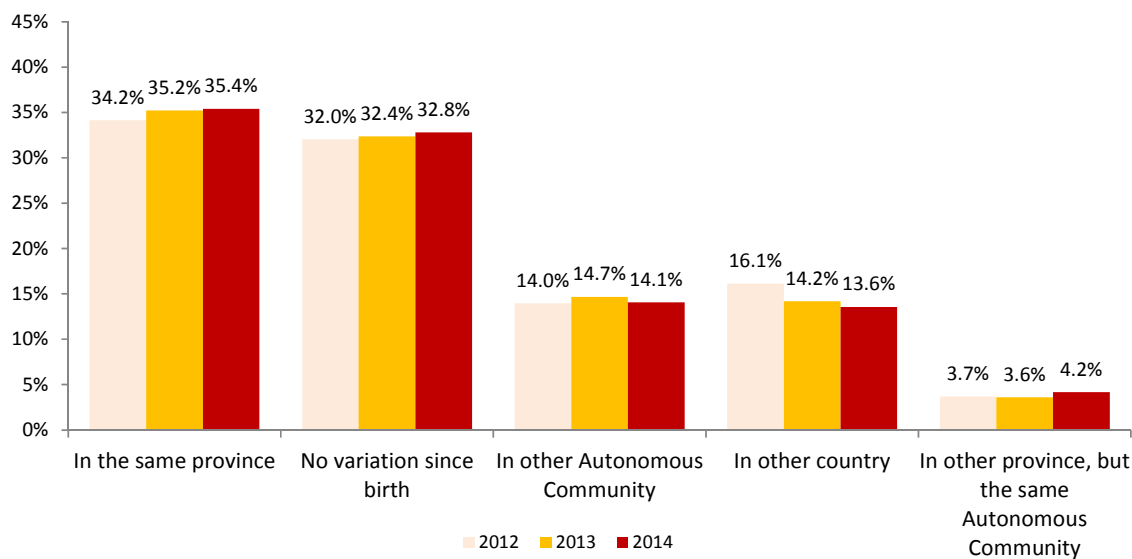

In absolute terms, 240,400 out of 5,933,300 unemployed persons in the first quarter of 2014 had changed municipality of residence in the last year, whereas 4,828,500 (81.4% of the total) had spent at least five years residing in the same municipality.

32.8% of unemployed persons had not made any change in municipality of residence since birth. 14.1% had arrived at their current municipality from another Autonomous Community, and 13.6% from abroad.

Mobility of unemployed persons, by location of the previous municipality of residence and time of residence in the current municipality

Year 2014	Time of residence in the current municipality

Percentage of employed persons who have changed their residence municipality in the last year by Autonomous Community

Percentage of unemployed persons who have not changed their residence municipality in at least five years by Autonomous Community

The number of employed persons who had changed their residence municipality within the same Autonomous Community in the last year is 271,100. The greatest intra-community mobility was recorded in Cataluña, Comunidad de Madrid and Andalucía.

Employed persons who have changed their residence municipality within their Autonomous Community in the last year

Unit: Thousand of persons

Total	271.1
Cataluña	74.8
Madrid, Comunidad de	41.9
Andalucía	35.8
Comunitat Valenciana	21.0
Canarias	15.6
Galicia	15.0
Castilla y León	11.8
País Vasco	11.8
Castilla-La Mancha	11.4
Balears, Illes	7.5
Aragón	5.8
Other Autonomous Communities	18.7

Inter-community mobility is smaller. The figure of employed persons who have changed their residence Autonomous Community in the last year was 110,100. Comunidad de Madrid was the Autonomous Community which attracted most of them (25,400), followed by Andalucía (15,900) and Cataluña (12,500).

Employed persons who changed their residence Autonomous Community in the last year, by current residence Autonomous Community

Unit: Thousand of persons

Total	110.1
Madrid, Comunidad de	25.4
Andalucía	15.9
Cataluña	12.5
Castilla-La Mancha	9.2
Comunitat Valenciana	8.4
Castilla y León	6.6
Other Autonomous Communities	32.1

Employed persons who have changed their residence Autonomous Community in the last year came mainly from Comunidad de Madrid, Castilla-La Mancha, Castilla y León and Andalucía.

Employed persons who changed their residence Autonomous Community by origin Autonomous Community

Unit: Thousand of persons

Total	110.1
Madrid	18.8
Castilla-La Mancha	15.6
Castilla y León	14.8
Andalucía	13.4
Com. Valenciana	7.8
Balears	6.0
Cataluña	5.8
Other Autonomous Communities	27.8

Foreign employed persons who have changed residence in the last year settled preferably in Comunidad de Madrid, Cataluña and Comunidad Valenciana.

Foreign employed persons who changed residence in the last year by current residence Autonomous Community

Unit: Thousand of persons

Total	38.4
Cataluña	8.8
Madrid	8.1
Com. Valenciana	6.0
Other Autonomous Communities	15.6

Methodological note

The Labour and Geographical Mobility Statistics (LGMS) researches the relationship between the employability of persons and their availability to change residence, through the joint study of the labour characteristics and the time they have resided in the municipality.

For this purpose, the LGMS includes specific variables derived from the Municipal Register Database of the INE (population base resulting from the coordination of the Municipal Registers) to the Economically Active Population Survey (EAPS) sample. In this way, it is possible to relate the demographic and labour variables in the EAPS with the geographical mobility registered in the administrative source. Regarding the latter, this will only consider inter-municipality changes in residence, as changes in address within the same municipality are not relevant for labour purposes.

Thus, the entire compilation process of the EAPS is taken advantage of, and through the addition of administrative data, new statistics are obtained with a minimal cost, and without increasing the response burden for informants.

The concepts and criteria used in these Statistics are coherent with those established by international institutions, both in labour matters (definitions of the relationship with economic activity taken from the EAPS) and in the characterisation of the regular residence.

There is a low incidence of mobility, and therefore, the EAPS sample that shows a change from one year to the next in the municipality of residence is small. Therefore, results are fundamentally obtained for the nation as a whole, and more aggregated data is obtained for the Autonomous Communities as permitted by statistical secrecy and the variation coefficient of the estimators.
