

Measuring alcohol consumption in social surveys – a comparative study

1st of June 2016

Speed session 4

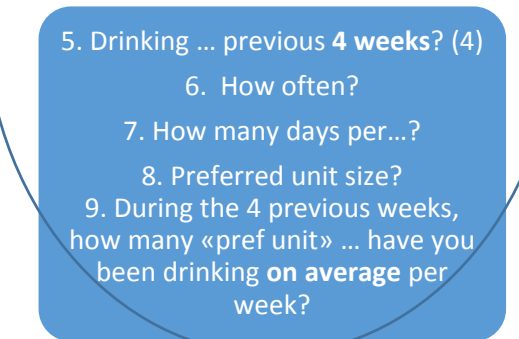

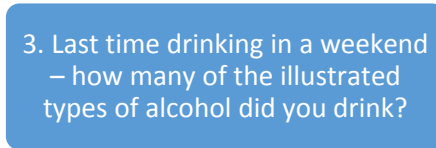

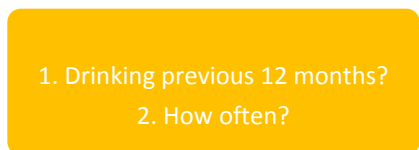

K-A. Lund, Statistics Norway
F. Berglund, Statistics Norway
B. O. Lagerstrøm, Statistics Norway
K. Ringdal, Norwegian university of science and technology

Background

3 parallel surveys with widely different ways to measure alcohol consumption

Survey designs

How do the different survey designs
produce different estimates?

Results

Survey	Drinking pop last 12 months %	Grams of alcohol consumed 1 week MALE	Grams of alcohol consumed 1 week FEMALE
Survey A (EHIS)	83	80	57
Survey B (ESS)	89	111	70
Survey C (NDS)	82	80	43
