# National index and by Autonomous Communities. Second Quarter 2024 Quartely Rate

#### Review and update of data

The data published today is final and is not subject to further revision. All the results are available on INEBase.

#### Methodological note

The objective of this survey is to find out, at a given time, the vision that establishment managers have about their situation.

The BCI survey collects opinions from establishment managers regarding the performance of their business for each last quarter and on their expectations for each coming quarter.

The methodology is based on the Japanese TANKAN index, that is, there is no weighting or elevation depending on the characteristics of the establishment since the opinion of each informant counts equally.

The survey methodology enables the integration of analogous data compiled by the statistics services of the Autonomous Communities, once their consistency is checked so they can be incorporated into the general process of the survey. There are currently agreements signed to this effect with Andalucia, Illes Balears, Canarias, Castilla y León, Cataluña, la Rioja, Extremadura and Comunitat Valenciana.

Type of survey: quarterly continuous survey.

Base period: First quarter of 2013.

Population scope: all establishments whose main activity is included in the following sections of CNAE-2009: B to N (both inclusive, except for division 70), R (only divisions 92 and 93) and S (only divisions 95 and

Geographical scope: the entire national territory.

Sample size: The simple is representative both nationally and by Autonomous Community and is made up of some 8,000 establishments.

Reference period: the reference is quarterly and questions are asked about the quarter ending and about the coming quarter.

Collection method: completion of the questionnaire by establishment managers themselves using one of the following methods: internet (IRIA system), e-mail, fax, telephone or by postal mail.

Further information is available in the methodology and the standarized methodological report.

INE's statistics are produced according to the European Statistics Code of Practice. For further information at Quality at INE and Code of Practice.
