- [HCPI detailed results](#)

According to the flash estimate issued by the INE, the annual inflation of the CPI in March 2026 is 3.3%.

This indicator provides an advance in the CPI which, if confirmed, would mean that the annual rate increases one point, as this variation was 2.3% in February.

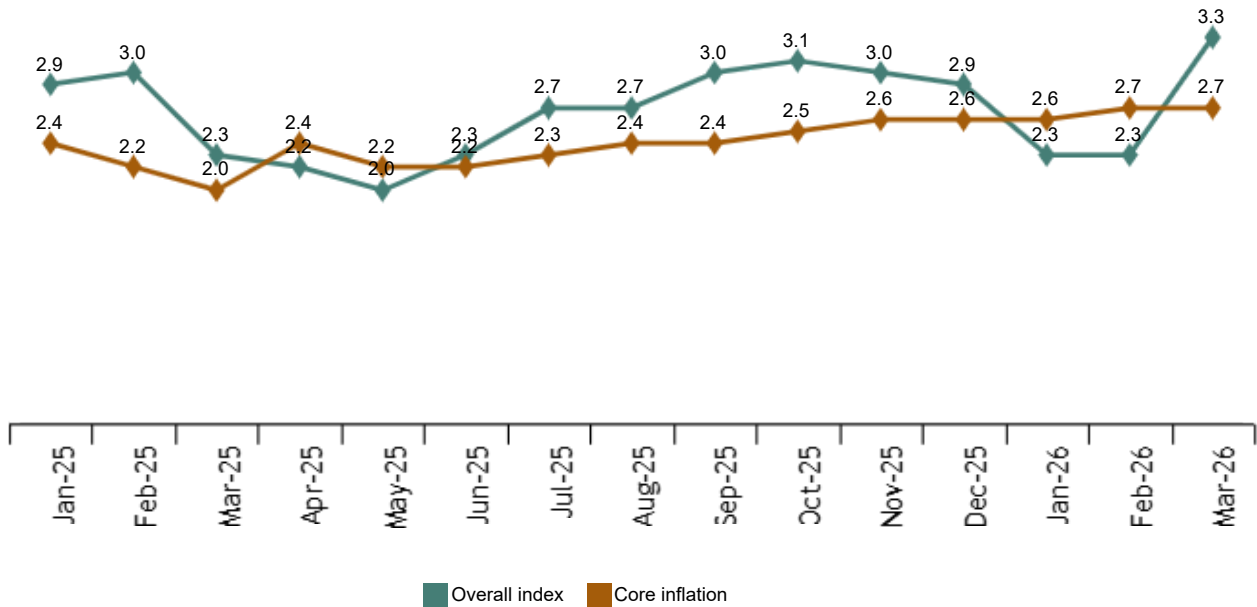

This development is mainly due to the rise in *fuel and lubricant prices for private vehicles*.

Also contributing, albeit to a lesser extent, are the fall in *electricity prices* - which was smaller than last year's - and the rise in *heating oil prices*, which fell in March 2025.

The estimated annual variation rate of core inflation (general index without unprocessed food or energy products) stands at 2.7%.

Harmonised Index of Consumer Prices (HICP)

In March, the estimated annual rate of change of the HICP rose by eight tenths of a percentage point to 3.3%.

The annual rate of core inflation in the HICP stood at 2.8%.

In turn, the estimated monthly variation rate of the HICP was 1.5%.

Data revisions and updates

The data released today is a preview of the final data that will be published next month. All the results of this operation are available at [INEBase](#).

Methodological note

The **Consumer Price Index (CPI)** is a short-term indicator that measures the evolution of the prices of consumer goods and services acquired by households resident in Spain.

On the other hand, the Harmonized Index of Consumer Prices (HICP) is an indicator whose objective is to provide a common inflation measure that allows international comparisons.

Type of survey: continuous monthly survey.

Base period: 2025.

Reference period of weightings: year prior to the current year.

Sample of municipalities: 177.

Number of products: 487 for traditional collection and 263 for scanner data.

Number of observations: approximately 200,000 monthly prices of traditionally collected items.

Functional classification: 13 groups, 45 subgroups, 108 classes and 196 subclasses; 55 headings and 32 special groups

General calculation method: Laspeyres' Chain Index.

Collection method: personal visits to establishments, e-mail, telephone and internet and scanner data.
