29 June 2026

Flash estimate of the Consumer Price Index (CPI)
Flash estimate of the Harmonised Consumer Price Index (HCPI)

June 2026

Main results

- The annual change in the flash estimate of the CPI stands at 3.2% in June, the same as the one registered in May.
- The annual rate of the core inflation flash estimate decreases one tenth to 2.9%.
- The annual variation of the HICP flash estimate is 3.6%.

More information

- CPI detailed results
- HCPI detailed results

According to the flash estimate issued by the INE, the annual inflation of the CPI in June 2026 is 3.2%.

This indicator provides an advance in the CPI which, if confirmed, would mean that the annual rate remains stable, as this variation was also 3.2% in May.

A key factor in this trend is the upward influence of *electricity and gas*, whose prices are rising more sharply than in June 2025.

Meanwhile, *fuel and lubricants for private vehicles* are exerting downward influence, with their prices falling compared with the rise seen in June last year.

The estimated annual variation rate of core inflation (general index without unprocessed food or energy products) decreases one tenth to 2.9%.

Methodological note

The **Consumer Price Index (CPI)** is a short-term indicator that measures the evolution of the prices of consumer goods and services acquired by households resident in Spain.

On the other hand, the Harmonized Index of Consumer Prices (HICP) is an indicator whose objective is to provide a common inflation measure that allows international comparisons.

Type of survey: continuous monthly survey.

Base period: 2025.

Reference period of weightings: year prior to the current year.

Sample of municipalities: 177.

Number of products: 487 for traditional collection and 263 for scanner data.

Number of observations: approximately 200,000 monthly prices of traditionally collected items.

Functional classification: 13 groups, 45 subgroups, 108 classes and 196 subclasses; 55 headings and 32 special groups

General calculation method: Laspeyres' Chain Index.

Collection method: personal visits to establishments, e-mail, telephone and internet and scanner data.

For more information you can access the methodology and the standardised methodology report (CPI y HICP).

INE statistics are produced in accordance with the Code of Good Practice for European Statistics. More information on Quality at INE and Code of Best Practices.
