Consumer Price Index (CPI). Base 2016
Harmonised Index of Consumer Prices (HICP). Base 2015
January 2019

Main results

- In January, the annual variation rate of the CPI was 1.0%, two tenths lower than that registered in the previous month.
- The annual change of core inflation decreases one tenth, reaching 0.8%.
- The monthly rate of the overall index was -1.3%.
- The annual rate of the Harmonised Index of Consumer Prices (HICP) was 1.0%, decreasing two tenths compared to December.

Annual evolution of consumer prices

In January, the annual rate for the overall Consumer Price Index (CPI) was 1.0%, two tenths lower than that registered in the previous month.

The groups with the most negative contribution to the annual rate were:

- **Food and non-alcoholic beverages**, which reduced its annual variation by four tenths to 0.9%, due to the stability of the prices of *fish and seafood*, compared with the increase registered in 2018.

In contrast, it is also worth noting the increase in the prices of *fresh vegetables*, which decreased in the previous year.

- **Transport**, with a rate of -0.2%, four tenths below the previous month, due to the fact that the prices of *fuel and lubricants* increased less this month than in January 2018.
- **Recreation and culture**, whose annual rate reduced by eight tenths to -0.9%, due to the fact that prices of *package holidays* decreased more this month than in January the previous year.

The annual variation rate of core inflation (overall index excluding unprocessed food and energy products) decreased one tenth to 0.8%, standing two tenths below that of the overall CPI.

Monthly rate of CPI

Overall index Percentage

Among the groups with a negative contribution to the overall index, worth noting were:

- **Clothing and footwear**, with a rate of -15.4%, which includes the effect of winter sales. Its contribution to the overall CPI was -1.037.
- **Recreation and culture**, with a variation of -2.3% and a contribution of -0.190, mainly due to a decrease in the price of *package holidays*.
- **Housing**, which has a rate of -0.6% and a contribution of -0.076, as a result of the decrease in the prices of *gas* and, to a lesser extent, of *heating oil* and *electricity*.
- **Household items**, with a variation of -0.5%. The decrease in the prices of *household textiles* is worth noting with regards to this evolution. The contribution of this group to the overall index is -0.028.
- **Hotels, cafés and restaurants**, whose rate of -0.2% and contribution of -0.022 is caused by the decrease in the prices of *accommodation services*.

In contrast, it is also worth noting the increase in the prices of *catering*.

On the other hand, the group with the greatest positive contribution was:

- **Transport**, with a variation of 0.3% and a contribution of 0.052, are almost entirely due to the increase in the prices of *fuels and lubricants*.

A more detailed analysis indicates the areas that had the greatest effect on the monthly IPC rate in the month of January.

Results by Autonomous Communities. Annual variation rates

The annual CPI rate decreased in 14 Autonomous Communities in January compared to December, and remains the same in the other three. The greatest decrease was registered in Castilla-La Mancha, with a decrease of five tenths.

In turn, the Communities that maintained their annual rate were Illes Balears, Comunidad Foral de Navarra and País Vasco.

Informative Annex

Weighting update, CPI base 2016

The National Statistics Institute has carried out its annual update of the weightings used for the calculation of the Consumer Price Index (CPI), in accordance with the CPI System, base 2016.

The CPI, base 2016, is characterised by its dynamism and ability to adapt to changing consumer behaviour, through the analysis of spending trends. With this objective, a detailed study of changes in the market is conducted every year.

As a result of this study, the CPI weighting structure was updated in 2019. The information used for this update comes from the Household Budget Survey (HBS) and other sources. In this way, the CPI reflects the changes in consumer habits over the last year.

These changes do not affect the continuity of the CPI series, base 2016, since the 2016 System formula calculation consists of linking the indices so that a break does not occur. Therefore, updating the weightings does not influence the published variation rates.

The following table shows the weightings used during 2018 and those that will be used during 2019 to calculate the overall CPI and the groups:

Methodological note

The **Consumer Price Index (CPI)** is a short-term indicator that measures the evolution of the prices of consumer goods and services acquired by households resident in Spain.

On the other hand, the Harmonized Index of Consumer Prices (HICP) is an indicator whose objective is to provide a common inflation measure that allows international comparisons.

Type of survey: monthly continuous survey.

Base period: 2016 (CPI) and 2015 (HICP).

Reference period of the weightings: the year preceding the current year.

Sample of municipalities: 177.

Number of products: 479 (CPI) and 478 (HICP).

Number of observations: approximately 220,000 monthly prices.

Functional classification: ECOICOP.

General calculation method: Chained Laspeyres.

Collection method: interviewers in establishments and centralised collection for special products.
