Índice de Precios de Consumo (IPC). Base 2006 Septiembre 2010

Índice general

	Variación mensual	Variación acumulada	Variación interanual
Septiembre	0,1	0,9	2,1

Principales resultados

- La tasa de **variación interanual** del IPC del mes de septiembre aumenta tres décimas y se sitúa en el **2,1%**.
- La tasa **anual** de la inflación **subyacente** es del **1,1%**, una décima superior a la registrada en agosto.
- La **variación mensual** del índice general es del **0,1%**.
- El **Índice de Precios de Consumo Armonizado (IPCA)** sitúa su **tasa anual** en el **2,1%**, con lo que aumenta tres décimas respecto al mes anterior.

Evolución anual de los precios de consumo

La tasa interanual del Índice de Precios de Consumo (IPC) general en el mes de septiembre es del 2,1%, tres décimas por encima de la registrada en el mes de agosto.

Los grupos que más han influido en este aumento son:

- **Transporte**, con una variación anual del **6,8%**, más de un punto y medio por encima de la registrada en agosto. Este comportamiento se explica, en su mayor parte, porque los precios de los *carburantes y lubricantes* han aumentado ligeramente este mes, mientras que en septiembre del pasado año registraron bajadas.
- **Hoteles, cafés y restaurantes**, cuya tasa anual aumenta tres décimas y se sitúa en el **1,5%**. Este crecimiento se debe, fundamentalmente, a que los precios de los *hoteles y otros alojamientos* han disminuido menos que en septiembre de 2009.

• **Vivienda**, con una variación del **4,2%**, tres décimas superior a la del mes anterior. Este comportamiento se debe a la subida de los precios del *gasóleo para calefacción*, frente a su bajada en septiembre de 2009.

A pesar del aumento de la variación anual del índice general, cabe destacar la disminución de la tasa del grupo:

• **Ocio y cultura**, que registra una tasa anual del **-0,7%**, seis décimas menor que la de agosto, debido al comportamiento del *viaje organizado*, cuyos precios experimentan bajadas más acentuadas que el mismo mes del año pasado.

Influencia de los grupos en la tasa anual del IPC

La tasa de variación interanual de la **inflación subyacente** (índice general sin alimentos no elaborados ni productos energéticos) aumenta una décima hasta el **1,1%** y sitúa su diferencia con el índice general en un punto.

Evolución anual del IPC Índice general y subyacente

Evolución mensual de los precios de consumo

En septiembre la tasa de variación mensual del IPC general es del **0,1%**.

Entre los grupos con repercusión positiva en el índice general, el más relevante es:

- **Vestido y calzado**, con una tasa mensual del **3,7%** en septiembre, que refleja el comportamiento de los precios tras la finalización del periodo de rebajas y el inicio de la temporada de invierno. Su repercusión en el IPC general es **0,271**.

Del mismo modo, entre los grupos con repercusión negativa en el índice general, los más relevantes son:

- **Ocio y cultura**, cuya tasa del **-2,3%** repercute **-0,183** en el índice general, debido principalmente a la variación de los precios del *viaje organizado*.
- **Hoteles, cafés y restaurantes**, con una tasa mensual del **-1,0%** y una repercusión de **-0,119**. Este comportamiento se explica en su mayor parte por la bajada de los precios de los *hoteles y otros alojamientos*, habitual tras la temporada estival.
