

30 December 2022

**Flash estimate of the Consumer Price Index (CPI) and
of the Harmonised Consumer Price Index (HCPI)
December 2022**

**The annual change in the flash estimate of the CPI stands at 5.8% in
December, one point below than the one registered in November**

**The annual rate of the flash indicator of underlying inflation
increases six tenths, to 6.9%**

The annual rate of the flash indicator of the HCPI is 5.6%

Annual rate evolution

The estimated annual inflation of the CPI in December 2022 is 5.8%, according to the flash indicator prepared by the NSI.

This indicator provides a preview of the CPI which, if confirmed, would mean a decrease of one point in its annual rate, since in November this variation was 6.8%.

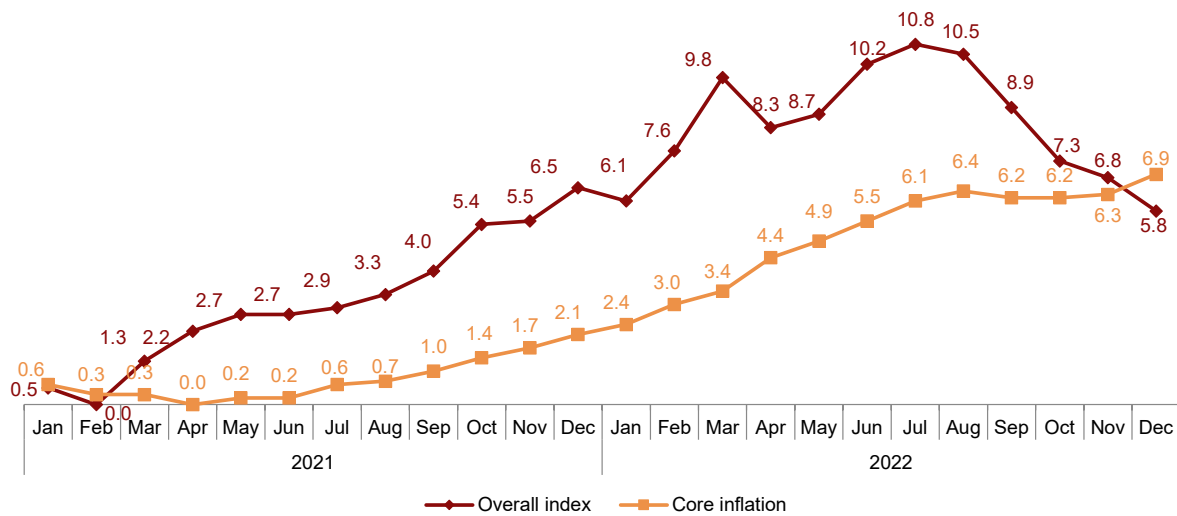

This development is due to *electricity prices* increasing less than in December 2021, and *fuel prices* decreasing more than last year.

In contrast, *clothing and footwear* stand out, with prices decreasing, but less than in December 2021, and the increase in *tobacco and processed food prices*.

The estimated annual variation rate of underlying inflation (general index excluding non-processed food and energy products) increases six tenths, to 6.9%.

Annual evolution of the CPI¹

General and underlying index. Percentage

¹ The last data refers to the flash estimate

Monthly rate evolution

Consumer prices registered a rate of 0.3% in December compared to November, according to the leading indicator of the CPI.

Harmonized Consumer Price Index (HCPI)

In December, the estimated annual variation rate of the HCPI stood at 5.6%, more than one point below than the one registered in the previous month.

For its part, the estimated monthly variation of the HCPI is 0.1%.

Data reviews and updates

The data released today is a preview of the final CPI and HCPI data to be released next month. Until then, the results are available at INEbase.

Methodological note

The Consumer Price Index (CPI) is a statistical measure of the evolution of the prices of goods and services consumed by the population that reside in family dwellings in Spain.

In turn, the Harmonised Consumer Price Index (HCPI) is a statistical indicator whose objective is to provide a common average of the inflation that allows conducting international comparisons

Type of survey: continuous on a monthly basis

Base period: 2021 (CPI) and 2015 (HCPI)

Reference period of weightings: year prior to the current year

Sample of municipalities: 177

Number of items: 462 (CPI) y 461 (HCPI), traditionally collected, and 493 scanner data.

Number of observations: approximately 210,000 prices per month.

Functional classification: ECOICOP.

General method of calculation: chained Laspeyres

Collection method: interviewers in establishments, *scanner data* and centralised collection for special items
