

Retail Trade Indices. Base 2005
February 2009. Provisional data

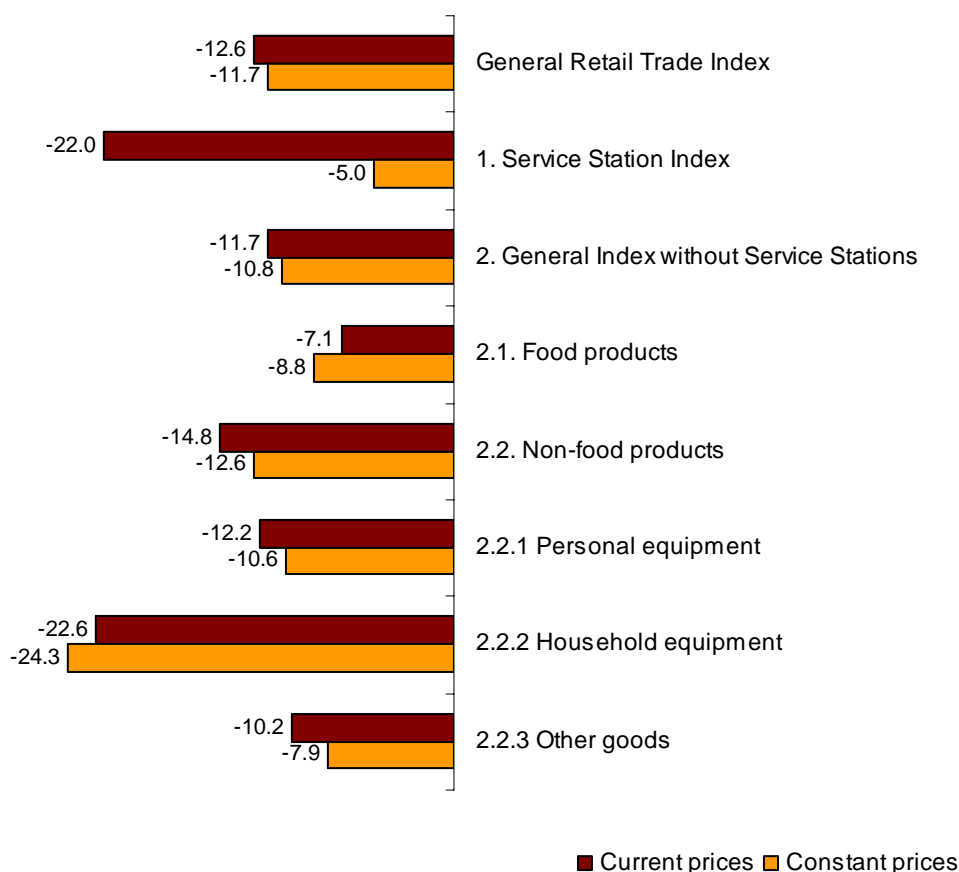

Retail trade at constant prices decreases 11.7% in February, as compared with the same month in 2008

Retail trade at constant prices (in other words, after adjusting the prices' effect) decreased 11.7% in February, as compared with the same month in 2008.

Sales excluding service stations showed a variation rate in constant terms of -10.8%, as compared with February 2008. The breakdown of these sales by product type showed an 8.8% decrease in food products, and a 12.6% drop in non-food products. Among the latter, the 24.3% decrease registered by retail sales of Household equipment, as compared with the same month the previous year, was of note.

Sales in service stations, after adjusting the prices' effect, registered a 5.0% decrease in February, as compared with the same month in 2008.

Annual Rates

All distribution classes experience a decrease in sales in February

The breakdown of the General Deflated Retail Trade Index by different distribution classes, showed a decrease in sales in February as compared with the previous year in all trade formulas. The smallest decrease was recorded in large chain stores, with a rate of -7.2%.

National Indices by distribution class

	Deflated index	% variation on same month previous year
General Retail Trade Index	82.8	-11.7
1. Service Station Index	94.6	-5.0
2. General Index without Service Stations	82.6	-10.8
2.1. Single retail stores	80.2	-10.7
2.2. Small chain stores	79.3	-12.8
2.3. Large chain stores	97.8	-7.2
2.4. Department stores	77.2	-11.7

Sales in large chain stores decrease 11.7%

The General Department Store Index, which reflects the behaviour of sales in premises larger than 2,500m², registered an interannual decrease of 11.7% in constant terms in February. Food products and non-food products decreased 10.1% and 12.6%, respectively.

Department Store Indices

	Deflated index	% variation on same month previous year
Department Store Index	77.2	-11.7
1. Food products	78.2	-10.1
2. Non-food products	77.0	-12.6

After eliminating the calendar effect, the interannual rate of the General Retail Trade Index is -9.1%

After eliminating the calendar effect (that is, the difference between the number of working days in a given month in different years), the deflated retail trade index registered a decrease, as compared with February 2008, of -9.1% as compared with -11.7% for the adjusted index. This adjustment was due to 2008 being a leap year.

General Deflated Retail Trade Indexs

Annual variation rates

All trade distribution classes experienced a decrease in employment, particularly small chain stores and department stores, which registered decreases in employment of 6.2% and 7.4% respectively. Employment in service stations decreased 3.4%, as compared with February 2008.

National Employment Indices

	Index	% variation on same month previous year
General Retail Trade Index	99.6	-3.7
1. Service Station Index	98.7	-3.4
2. General Index without Service Stations	99.6	-3.7
2.1. Single retail stores	98.3	-2.4
2.2. Small chain stores	95.9	-6.2
2.3. Large chain stores	112.4	-1.4
2.4. Department stores	97.8	-7.4

Retail trade shows an interannual rate decrease in all Autonomous Communities

All Autonomous Communities recorded a decrease in retail trade in constant terms, as compared with the same month the previous year. Disregarding service stations, sales also fell in all Autonomous Communities.

The Autonomous Communities which showed the greatest decreases were Comunitat Valenciana (-15.4%), La Rioja (-15.0%), Illes Balears (-14.0%).

Deflated indices Annual variation rate

All Autonomous Communities showed negative employment rates

By Autonomous Community, employment in the retail trade showed a generalised decrease, both considering employment in service stations, and where this is not accounted for.

The greatest decreases in employment for the retail trade total were shown in Canarias (–5.4%), Aragón (–5.2%), Castilla-La Mancha (–5.0%).

Employment index Annual variation rate

Methodological note

National Classification of Economic Activities 2009 (NCEA-2009)

The European Parliament and Council approved the new classification of economic activities for statistical purposes within the European Union, known as NACE Rev.2, on 20 December 2006 by means of Regulation (CE) no. 1893/2006. This Regulation also stipulates the use of the new classification in community statistics, in order to ensure its harmonised implementation. The short-term statistics are to be found among these, including the *Retail Trade Indices*.

Adaptation to the new European classification (NACE Rev.2) and to its national version (NCEA-2009) has caused changes in the *Retail Trade Indices* survey. For some activities, the new classification has only entailed a change of code, but not of content; but in other cases, the activities are incorporated into different branches or sectors. The main difference in the retail sector is the introduction, in this sector, of companies whose main activity is the retail trade of automotive fuel in specialist establishments (service stations).

The introduction of this new activity within division 47 (Retail trade) has given rise to changes in the indices which have been published thus far. **The following indicators within the Retail Trade Indices statistics for the national total** have been disseminated since January 2009:

–**General Retail Trade Index.** This shows the evolution both of sales (at current prices, constant prices and adjusted for calendar effect) and of employment, in the division 47 total.

–**Service Stations Index.** This shows the evolution both of sales (at current prices, constant prices and adjusted for calendar effect) and of employment, in the group 47.3. Retail Trade of Automotive Fuel in Specialist Establishments.

–**General Index without Service Stations.** This shows the evolution both of sales (at current prices, constant prices and adjusted for calendar effect) and of employment, in the division 47 except group 47.3, and is comparable to the previous General Index which had been published until January 2009.

Moreover, a breakdown is published of the now **General Index without Service Stations by product: Food and Non-Food** (distinguishing Personal goods, Household equipment and Other goods) and by **distribution class: Single retail stores, Small chain stores, Large chain stores and Department stores**. These indices, by product and by distribution class, correspond with those which had been published until January 2009.

By Autonomous Community, both the General Retail Trade Indices and the General Indices without Service Stations, showing the evolution in each Autonomous Community of sales and employment for the total of division 47 and for the total of division 47, excluding service stations, are disseminated.

On 29 May 2008, Commission Regulation (CE) no. 472/2008 on the transmission in NACE Rev.2 of short-term statistics, wherein European directives are established for the dissemination of results in a new classification, was approved. Pursuant to the provisions of

this Regulation, as of the reference month of January 2009, the indices were published for the first time in the new classification, NCEA-2009.

Furthermore, **in order to guarantee comparability of information over time, the INE publishes the retrospective series of this new classification in INEBASE.**

In the following link on the INE website, there appears complete information regarding all the changes arising from the new encoding of branches of activity:
