

29 February 2008

**Harmonized Index of Consumer Prices (HICP) flash estimated
February 2008**

The HICP annual inflation estimated stands at 4.4% in February

The HICP annual inflation is expected to be 4.4% in February 2008, according to the flash estimated issued by the INE. This index provides a preview of the HICP that, if confirmed, would imply that the annual rate remained unchanged, since in January this change was 4.4%.

The INE issues this indicator with the aim of incorporating it into the calculation of the HICP flash estimated of the European Monetary Union (EMU) published by Eurostat. Obtaining this EMU flash estimated forms part of the Eurostat and European Central Bank policy of offering timely and quality data that is comparable with that produced by the United States.

Computation of the flash estimated

The flash estimated is computed using the same methodology as that used for the HICP. The difference between these indicators lies in the information used. The flash estimation procedure uses statistical modelling methods to estimate the information not available at the time of publication.

The flash estimated provides information only as a guideline, and therefore it does not have to coincide with the HICP data.

Future publication dates

The expected dates of publication for the next months are:

| Index for | Spanish HICP flash estimated | Spanish HICP |
|------------------|-------------------------------------|---------------------|
| February 2008 | 29 February 2008 | 13 March 2008 |
| March 2008 | 31 March 2008 | 11 April 2008 |
| April 2008 | 29 April 2008 | 13 May 2008 |
