

Total expenditure survey
June 2020. Provisional data

Total expenditure by international tourists visiting Spain in June decreases by 98.6% compared with the same month of 2019

Regarding June 2019, average expenditure per tourist stands at 651 euros, 40.6% less, and the average stay is 5.7 days with a decrease of 1.0 days

Total expenditure made by international tourists visiting Spain in June reached 113 million euros, representing a decrease of 98.6% as compared to the same month of 2019.

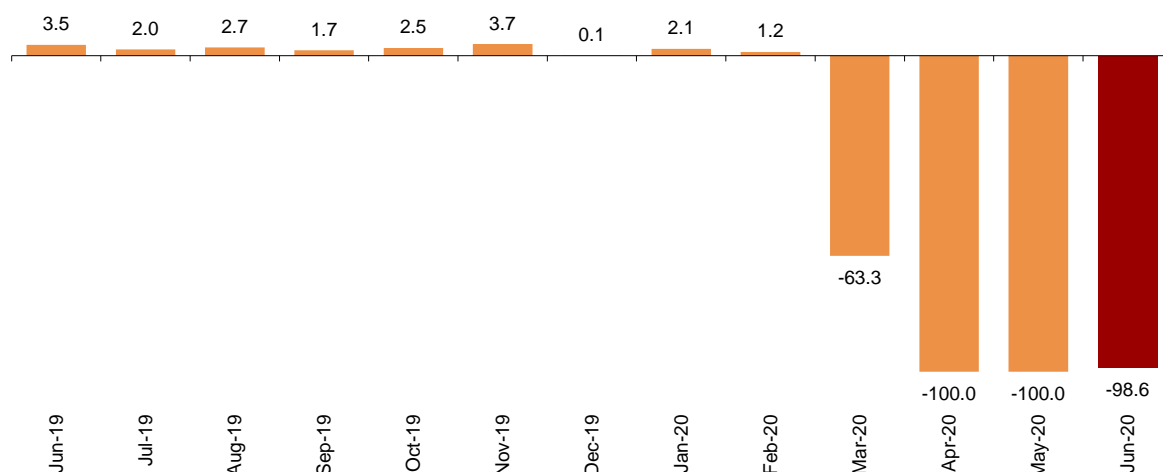

The average expenditure per tourist stood at 651 euros, with an annual decrease of 40.6%. On the other hand, the average daily expenditure decreased by 30.4%, up to 114 euros.

The average stay by international tourists was 5.7 days, indicating a decrease of 1.0 days compared to the average June 2019.

During the first six months of 2020, the total expenditure by international tourists decreased by 70.6%, as compared with the same period of the previous year, reaching 11,840 million euros.

Main destination Autonomous Communities

The main destination Autonomous Communities with the greatest weight in total tourist expenditure in June were Cataluña (with 29.1% of the total), Illes Balears (20.6%) and Comunitat Valenciana (13.9%).

Total expenditure by main destination Autonomous Community

Percentage

The tourist expenditure decreased by 98.5% in Cataluña, by 98.7% in Illes Balears and by 98.0% in Comunitat Valenciana.

The remaining main destination Autonomous Communities of tourists showed negative annual rate variations.

International tourist expenditure by Autonomous Community main destination

(*): It is distinguished two main groups of accommodation, depending on whether there was a monetary transaction or not: rented accommodation (payment accommodation; hotels, renting accommodation, camping site, rural accommodation and other rented accommodation) or non rented accommodation (own dwelling, family or friends dwellings and other non rented accommodation)

Stopovers on trips and overnight stays by Autonomous Communities

Stopovers¹ on trips by international tourists in June decreased by 97.8% in the annual rate. Of them, 35.8% were carried out in Cataluña (with a decrease of 96.9%).

On the other hand, the total number of overnight stays by international tourists in all types of accommodation (hotels, holiday dwellings, own homes, homes of relatives or friends, rented dwelling, etc.) reached 1.1 million, representing a decrease of 98.0%.

Cataluña was the Autonomous Community with the most overnight stays (375,681, 96.8% less than in June 2019). It was followed by Comunitat Valenciana (246,944 overnight stays and a decrease of 97.1%) and Illes Balears (221,606, 98.4% less).

Stopovers and overnight stays by Autonomous Community of destination

Review and update of data

Coinciding with today's publication, INE has updated the data corresponding to the month of June 2019. The results are available at INEBase.

¹ A stopover refers to each overnight stay made during the trip. A trip may have as many stopovers as intermediate destinations where the traveller has stayed at least one night.

Note regarding COVID-19's impact on the statistical operations FRONTUR and EGATUR in June 2020

The end of the state of alarm in force since March 17, 2020, has not meant the suppression of access controls to Spain through the different routes, so, although since June 21 it is no longer in force, there are limitations determined by the orders:

- Order INT / 550/2020, of June 21, extending the controls at the internal borders with Portugal temporarily restored due to the health crisis caused by COVID-19.
- Order INT / 551/2020, of June 21, extending the criteria for the application of a temporary restriction of non-essential travel from third countries to the European Union and Schengen associated countries for reasons of public order and public health on the occasion of the health crisis caused by COVID-19.

that restrict in June 2020 the free entry of visitors to our country.

Similarly and in reverse, the orders

- Order SND / 518/2020, of June 11, which regulates the authorization of a pilot program to open safe tourist corridors in the Autonomous Community of the Balearic Islands by partially lifting temporary controls at established internal borders on the occasion of the health crisis situation caused by COVID-19.
- Order ICT / 534/2020, of June 16, which expands the annex to Order SND / 518/2020, of June 11, which regulates the authorization of a pilot program to open tourist corridors insurance in the Autonomous Community of the Balearic Islands through the partial lifting of temporary controls at the internal borders established due to the health crisis situation caused by COVID-19.

in June, they set up a series of safe tourist corridors within the period of the alarm state that allow the entry of visitors even before the end of said period.

Therefore, in determining the number of visitors estimated by the FRONTUR-EGATUR statistics, the following restrictions consistent with the aforementioned orders have been taken into account. Specifically,

- Railway: International flows have been nil, so the estimate of the number of visitors through this access road in June has been zero.
- Road: Visitors from the Portuguese border are not considered, since it has been closed throughout the month, so visitors are null. On the French border, only the presence of visitors from the same is considered as from June 21.
- Port: Only visitors from the 21st day onwards for countries in the Schengen area are taken into account, with regular passenger flows.
- Airport: In the specific case of the air relationship between Germany and the Balearic Islands, visitors are observed from June 15. For the rest of the relations in the European Schengen area, passenger flows are observed only from June 21.

Visitors entering Spain from third countries outside the European Schengen area are not contemplated, by virtue of the orders cited above (Order INT / 551/2020), in force until June 30.

The time limits of the 15th and 21st days, previously mentioned, include those days.

As indicated in previous notes, the moment in which the information collected from visitors is carried out (trip made, stay, reason, expense made ...) is the moment when they leave the country by any of the routes previously mentioned, so the only interviews that have been carried out during the month of June have been after the indicated dates. **Thus, complete information is available on the trips made by all visitors who left Spain from June 15 exclusively on Illes Balears and from June 21 for the whole of Spain.**

However, both the exceptions established by the aforementioned provisions and the way in which data collection is carried out determine that there are certain aspects of the operation that must be taken into account during this period.

Firstly, citizens of Spanish nationality residing in other countries are allowed access to Spanish territory even within the period of the state of alarm, as well as other travelers with just cause who could be considered, in some cases visitors. However, the low volume of these flows and the impossibility of their accurate characterization advise against their accounting, in the validity of the state of alarm.

Secondly, although the methodological process of the survey has allowed obtaining results, the fact that field work has only been able to start from June 15 in the Balearic Islands and from June 21 in the whole of Spain, has determined that a certain lack of sample has had to be faced in some strata, which has been supplemented by the usual sample complement mechanisms designed by the methodology of this statistical operation.

Taking all these aspects into account, it has been possible to build, with sufficient guarantee, the usual monthly estimators and, therefore, **the INE considers that the data provided by the statistics of FRONTUR and EGATUR are of sufficient quality to be disseminated and used by regular users of these operations.**

Methodological note

The main objective of the Tourist Expenditure Survey (EGATUR) is to obtain monthly information on the tourist expenditure made by non-residents in Spain in their trips to our country.

For the preparation of EGATUR the international definitions and recommendations of the UNWTO and EUROSTAT in this field are followed.

Type of operation: continuous monthly statistics.

Population scope: this refers to non-residents in Spain who enter our country, whether or not they have stayed overnight, as well as those who pass through our country in transit.

Geographical scope: the entire national territory. The sample is collected at the main access points for non-resident travellers (road, airport, port and rail).

Reference period of the results: the month.

Sample size: The theoretical annual sample size of EGATUR exceeds 127,000 surveys, which are distributed throughout the year according to the seasonality of the flow of passengers and to the sample design, which is defined for each access road independently, setting a fraction of the sub-sampling from the FRONTUR sample.

Type of sampling: Single-stage, where the estimates of the FRONTUR survey are used as the target population to which the EGATUR data are elevated.

Collection method: The collection of information is carried out by direct interview when the traveler leaves Spain, using a multilingual electronic questionnaire. It must be taken into account that visitors are surveyed at the time of leaving the country, so the information collected may refer to a longer period than that of the reference month.

A more complete tabulation plan with the main series of aggregates, as well as the microdata file for the reference month, is available on the INE website.
