## Main destinations

The main Autonomous Communities of destination for trips by residents in the first quarter were Andalucía (16.6% of the total), Cataluña (12.8%) and Comunitat Valenciana (9.1%).

If domestic trips by residents are related to the destination, the phenomenon of travel was more intense in Aragón (with 1,349 trips per 1,000 inhabitants<sup>3</sup>), Castilla y León (with 1,280) and Castilla – La Mancha (1,019).

<sup>3</sup> For the calculation of this indicator, we have used both the trips of the population aged 15 and over, as well as the population aged 15 and over residing in the destination (calculated as an average of the population for each of the months of the quarter).

\* This indicator considers both the trips of the population of 15 years and over and the population aged 15 and over resident in origin (calculated as the mean of the three months of the quarter).

Removing the effect caused by the size of each Autonomous Community, those who travelled the most were residents of Aragón (1,046 trips per 1,000 inhabitants<sup>4</sup>), Comunidad de Madrid (855) and Castilla y León (825).

In turn, Región de Murcia (502 trips per 1,000 inhabitants), La Rioja and Galicia (both 600) were the Autonomous Communities with the lowest ratio of trips by inhabitants.

<sup>4</sup> This considers the resident population aged 15 years old or over (calculated as the average of the population of each of the months of the quarter).

**Monthly data**

In January there were 12.6 million trips, in February 11.1 million and in March 11.5 million. Trips made in January had an average duration of 4.2 nights, higher than the duration of trips made in February and March, of 2.9 in both cases.

January was the month with the lowest percentage of trips within the Autonomous Community of residence (45.6%, compared to 46.8% in February). This is due to the higher percentage of trips abroad (12.0% of the total).

Leisure was the main reason for travelling in February and March, (with 44.8% and 44.5% of the total, respectively), and Visits to relatives or friends was the main reason for travelling in January (46.4%). Work-related travel peaked in March (15.1% of the total).

January is the month with the highest proportion of non-market accommodation (65.2%). Hotel accommodation recorded its largest share in February (28.1%) and the rest of market accommodation in March (14.7%).

## Data review and updates

The data published today is final and is not subject to further revision. All results are available on INEBase.

<sup>5</sup> An excursion is considered any visit without an overnight stay outside the person's usual environment. Trips that are part of someone's normal routine are excluded, as are those made from second homes, from a cruise ship, or from any other accommodation other than the usual one.

## Methodological note

The main objective of the Residents Travel Survey (ETR/FAMILITUR) is to provide information on the trips and excursions carried out each month by the population resident in Spain, both within the country and abroad, and their main characteristics (duration, expenditure, reason, accommodation, etc.).

In addition, the survey provides annual information on the percentage of the population travelling for personal reasons and investigates the reasons given by those who do not travel.

**Type of operation:** quarterly continuous survey.

Population scope: Resident population aged 15 and over in family dwellings (indirect information regarding trips taken by children under 15 is also provided).

**Geographical scope:** the entire national territory.

**Reference period of the results:** month, quarter, year (depending on the variable and the degree of disaggregation).

**Sample size:** the effective monthly sample is around 8,200 persons, who provide information on the trips completed in the two months prior to the interview. Thus, the results of a reference month are obtained from around 16,400 questionnaires.

**Type of sampling:** stratified three-stage random sampling is used. The framework is the MDG Georeferenced Address Framework. The first stage units are the census sections, the second stage units are the dwellings, and a person aged 15 or over has been selected within each dwelling. The stratification criterion in the first stage was the size of the municipality to which the section belongs. In both cases, a variable is used as a substratification criterion to define the household's propensity to travel.

The selected persons collaborate three times in alternate months over six months, leave the sample one semester, and are interviewed another three times during the following semester.

**Collection method:** computer-assisted telephone or personal interviews, online questionnaire (since 2018).
