Methodological Annex

Base changes of the Industrial Turnover Indices and the Industrial New Orders Received Indices

Today, the National Statistics Institute (INE) is publishing the first Industrial Turnover Indices (ITI) and Industrial New Orders Received Indices (INORI) in **base 2005**. This change in the base year of the indicators implies not only a transfer in their time reference, from 2000 to 2005, but also an **adaptation of the same to the Spanish industrial sector of the year 2005, this adaptation being reflected in the activities researched, in the weightings and in the panel of informant units.**

In addition to the base change to the year 2005, the indices **present another innovation: they use the new National Classification of Economic Activities of 2009 (CNAE-2009)**, passed by Royal Decree 475/2007, of 13 April.

The Industrial Turnover Indices and the Industrial New Orders Received Indices, base 2000, used the National Classification of Economic Activities from the year 1993 (CNAE-93). As of January 2009, these indicators will be published only in the new classification (CNAE-2009).

The series beginning January 2002 for the activities and the Large Industrial Sectors (LIS) are also being published, in base 2005 and with the new CNAE-2009. As these are relatively new indices in Spain (they were first published in January 2002), and as there have been changes in both the comparison base and the classification of activities, these series have not been obtained by applying a linking coefficient to the indices calculated in the new classification in base 2000, but rather have been obtained directly through a double encoding of the activities of the sample units in CNAE-93 and in CNAE-2009.

All of these series, and a broader description of this change may be viewed on the INE website (http://www.ine.es/en/welcome_en.htm).
