

1 July 2020

## Non-hotel Tourist Accommodation Occupancy Survey May 2020. Provisional data

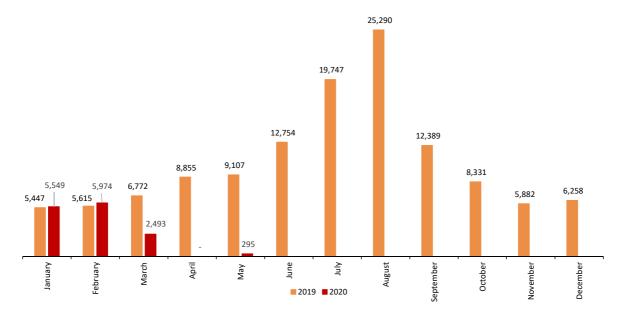

## Overnight stays in non-hotel tourist accommodation decrease by 96.8% in May, as compared with the same month of 2019

#### COVID-19's effects on the Non-Hotel Tourist Accommodation Occupancy Survey in May

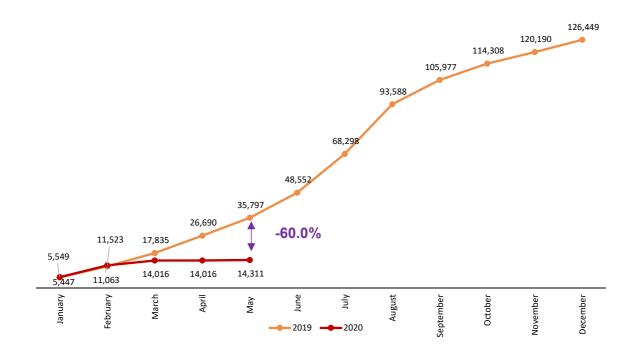

- In accordance with Order SND/399/2020<sup>1</sup>, from May 11th onwards hotels and tourist accommodation were able to open to the public with certain restrictions, as the territories in which they were located reached at least Phase 1 of the plan for the transition to a "new normality."
- However, given the restrictions on population mobility as part of the state of alarm, during May in Spain only 19,647 of the almost 178,765 non-hotel accommodation establishments (tourist apartments, camping sites, rural tourism accommodation and tourist hostels) were open, 88.1% less than for the same month in 2019. The total number of bed-places offered was 150,698, or 9.8% of the total.
- During the month of May, 42,150 travellers stayed in a non-hotel tourist accommodation, with a total of 295,170 overnight stays. This represents 1.9% of the total travellers and 3.2% of the total overnight stays estimated a year ago. Tourist apartments were the most popular, followed by camping sites.
- In the January-May, there were 14.3 million overnight stays in Tourist accommodations, 60.0% less than the same period for 2019.
- The Autonomous Community offering the most bed-places in non-hotel accommodations at start of de-escalation was Comunitat Valenciana, with 38,486 bed-places, 83.0% less than in May 2019. Comunidad de Madrid served the most travellers, with 6,301 travellers making 34,952 overnight stays.
- Due to the low number of open accommodations, less information than usual is being released today. In apartments, campsites and rural tourism, data is offered at the national level and by Autonomous Community. For hostels, information is available only at the national level. These figures are the only ones meeting the quality criteria for release. Provincial, area and tourist point information, as well as price indices for Apartments, Camping sites and Rural Tourism Accommodations, are not disclosed in this press release.

<sup>&</sup>lt;sup>1</sup> Order SND/399/2020, of May 9, for the relaxation of certain national restrictions, established following the declaration of the state of alarm in application of phase 1 of the Plan for the transition to a new normality

## Overnight stays in non-hotel accommodation monthly. Comparative 2019-2020 Thousands

## Accumulated overnight stays in non-hotel accommodation. Comparative 2019-2020 Thousands

#### Open establishments

In May, a total of 19,647 non-hotel accommodations<sup>2</sup> were open in Spain, 88.1% less than in the same month of 2019. This represents 11.0% of the total directory of establishments in that month.

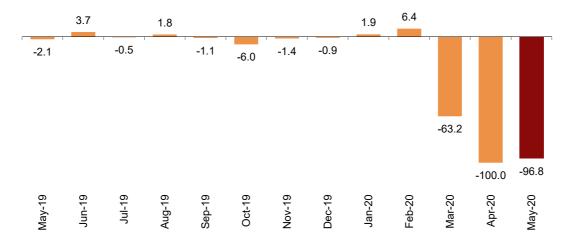

Type of	Number of open		Percentage of	Number of	Percentage

<sup>(\*)</sup> Estimated number of apartments

#### **Overnight stays**

Overnight stays in non-hotel accommodation exceeded 295,000 in May, representing a decrease of 96.9% compared to the 9.1 million registered for the same month of 2019.

## **Annual variation rate of overnight stays** Percentage

During the first five months of 2020, overnight stays decreased by 60.0% as compared to the same period of the previous year.

<sup>&</sup>lt;sup>2</sup> The number of tourist apartments is taken into account.

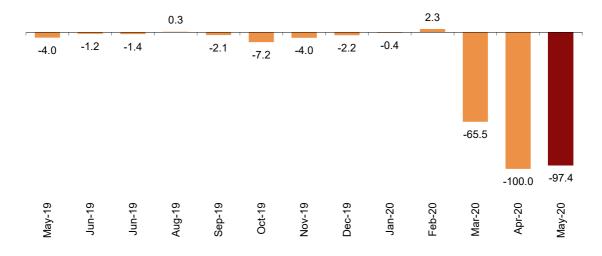

By country of residence, overnight stays by travellers who reside in Spain decreased by 94.5% in the annual rate, exceeding 176,000. In turn, overnight stays by non-residents decreased 98.0%, with just over 118,800.

Regarding this final piece of information, it should be noted that Order INT/248/2020, of May 16, which established action criteria for the Security Forces and Bodies related to the temporary reestablishment of border controls and Order INT/270/2020, of May 21, which established criteria for the application of a temporary restriction on non-essential travel from third countries into the European Union and associated Schengen countries for public policy and public health reasons, due to the health crisis occasioned by COVID-19, in and of themselves suppressed the flow of international visitors to Spain for tourism. Therefore, the group of non-resident travellers in Spain who stayed in hotels and tourist accommodations during this month of May consisted either of those who did not leave Spain once these legal acts entered into force, or those who travelled to Spain during this period based on certain exceptional previsions established in the orders.

#### **Holiday Dwellings**

Overnight stays at tourist apartments decreased by 97.4% in May as compared with the same month of the previous year.

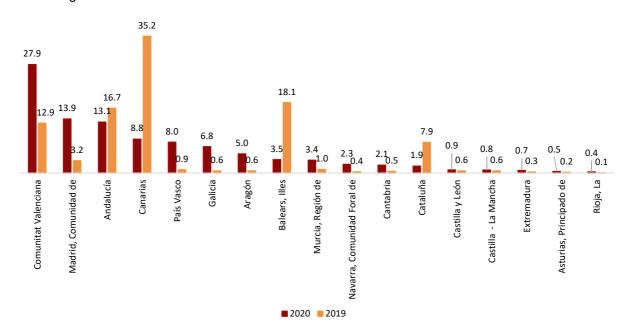

## **Annual variation rate for overnight stays**Percentage

Comunitat Valenciana, Comunidad de Madrid and Andalucía were the main destinations for all travellers in Spain in May, with annual variation rates in the number of overnight stays of -94.4%, -88.9%, and -98.0% respectively.

The distinct percentage distribution of overnight stays in Canarias should be noted as compared to last year. Thus, in May 2020, 8.8% of total overnight stays were in this Autonomous Community (with an annual rate of –99.4%), compared to 35.2% of the total in May 2019.

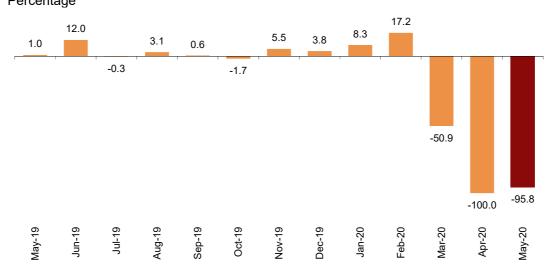

## **Distribution of total overnight stays. Compared to May 2019-2020** Percentage

#### **Tourist Campsites**

Overnight stays at tourist campsites registered a decrease of 95.8% in May as compared with the same month of the previous year.

## **Annual variation rate for overnight stays**Percentage

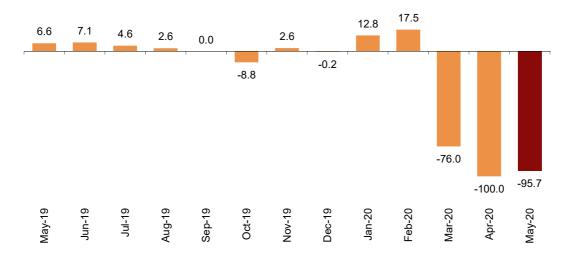

During the month of May, 27.1% of the offered parcels were occupied, 18.5% more than in the same month of 2019. The weekend occupancy rate by pitch reached 30.4%, with an annual decrease of 15.1%.

#### Rural tourism accommodation

Overnight stays in rural tourism accommodation had an annual decrease of 95.7% in May.

## **Annual variation rate for overnight stays** Percentage

In rural tourism accommodation, 6.3% of the bedplaces were occupied, 59.9% less than in May 2019. The weekend occupancy rate stood at 7.8%, with an annual decrease of 72.6%.

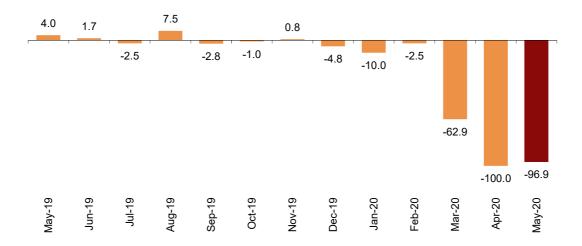

#### **Hostels**

Overnight stays in hostels registered an annual decrease of 96.9% May. Resident overnight stays decreased by 99.1% and non-resident overnight stays did so by 92.7%.

9.9% of the available bed-places were occupied, 67.0% less than May 2019. The weekend occupancy rate reached 7.0%, with a 78.2% decrease.

#### Annual variation rate for overnight stays

Percentage

## Evolution of travellers and overnight stays in all Spanish collective tourist accommodation

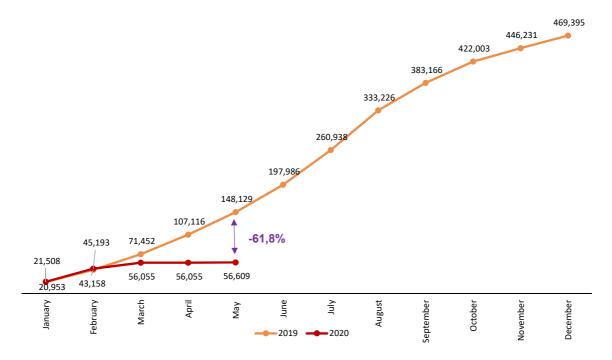

In May, overnight stays in Spanish collective tourist accommodations (hotels<sup>3</sup>, holiday dwellings, tourist campsites, rural tourism accommodation and youth hostels) decreased by 98.6% in the annual rate.

In the first five months of the year, overnight stays in all tourist accommodations decreased by 61.8%.

 $<sup>\</sup>ensuremath{^{3}}$  The press release on Hotel Tourism Short-Term Trends was published on 23 June.

#### Accumulated overnight stays. Comparative 2019-2020

Thousands

#### Revision and updating of data

Coinciding with today's publication, the INE has updated the data for May 2019 of the Occupancy Survey in: Holiday Dwellings (HDOS), Campsites (COS), Rural Tourism Accommodation (RTAOS) and Hostels (HOS). As well as the Holiday Dwelling Price Index (HDPI), the Tourist Campsite Price Index (TCPI) and the Rural Tourism Accommodation Price Index (RTAPI).

#### Methodological note

The main objective of the Holiday Dwelling Occupancy Survey (HDOS) is to ascertain the behaviour of a series of variables that make it possible to describe the segment that occupies this type of accommodation within the tourist sector, both from the point of view of supply and demand.

The Holiday Dwelling Price Index (HDPI) is a statistical measure of the monthly evolution of the prices offered by holiday dwelling establishments to their clients.

**Type of operation**: on-going monthly survey.

**Population scope:** holiday apartment establishments and/or companies operating holiday apartments.

**Geographical scope:** the entire national territory, with the exception of Ceuta and Melilla, where there are no establishments of this type.

Reference period for the results: monthly.

**Reference period for the information:** The consultation of basic data refers to a fortnight of the month, chosen randomly, in such way that the complete month is covered among all establishments.

**Type of sampling:** stratified sampling by province and establishment size, and stratified at island-size level for Canarias and Illes Balears.

**Collection method:** questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the <u>methodology and the standardised methodological report</u> for each of them in INEbase.

The main objective of the Campsite Occupancy Survey (COS) is to ascertain the behaviour of a series of variables that make it possible to describe the segment that this type of accommodation occupies within the tourist sector, from the viewpoint of both supply and demand.

The Tourist Campsite Price Index (TCPI) is a statistical measure of the monthly evolution of the prices offered by campsites to their clients.

Type of operation: on-going monthly survey.

**Population scope:** camping establishments.

**Geographical scope:** the entire national territory, with the exception of Ceuta and Melilla, where there are no establishments of this type.

Reference period for the results: monthly.

**Reference period of the information:** seven consecutive days of each month, chosen randomly in such way that all the establishments cover the whole month.

**Sample size**: approximately 1200 establishments.

**Type of sampling:** comprehensive survey in all provinces.

**Collection method:** questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the <u>methodology and the standardised methodological report</u> for each of them in INEbase.

The main objective of the Rural Tourism Accommodation Occupancy Survey (RTAOS) is to ascertain the behaviour of a series of variables that make it possible to describe the fundamental characteristics of this type of accommodation within the tourist sector, both from the point of view of supply and demand.

The Rural Tourism Accommodation Price Index (RTAPI) is a statistical measure of the monthly evolution of the prices that entrepreneurs of this type of accommodation apply to their clients.

Type of operation: on-going monthly survey.

**Population scope:** rural tourism establishments registered as such in the corresponding register of each Autonomous Community.

**Geographical scope:** the entire national territory, with the exception of Ceuta and Melilla where there are no establishments of this type.

Reference period for the results: monthly.

**Reference period for the information:** The consultation of basic data refers to all the days of the month.

**Type of sampling:** comprehensive survey in all provinces except those where the population size is large enough to take a sample.

**Collection method:** questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the <u>methodology and the</u> standardised methodological report for each of them in INEbase.

The main objective of the Hostels Occupancy Survey (HOS) is to ascertain the behaviour of a series of variables that make it possible to describe the fundamental characteristics of this type of accommodation within the tourist sector, both from the point of view of supply and demand.

For more information on this statistical operation, you can consult the <u>methodology and the</u> standardised methodological report in INEbase.
