Revision and updating of data

Coinciding with today's publication, the INE has updated the data for October 2017 of the Holiday Dwelling Price Index (HDPI), the Tourist Campsite Price Index (TCPI) and the Rural Tourism Accommodation Price Index (RTAPI). On the other hand, the occupancy survey data published today is provisional and will be reviewed in the third quarter of next year.

Methodological note

The main objective of the Holiday Dwelling Occupancy Survey (HDOS) is to ascertain the behaviour of a series of variables that make it possible to describe the segment that occupies this type of accommodation within the tourist sector, both from the point of view of supply and demand.

The Holiday Dwelling Price Index (HDPI) is a statistical measure of the monthly evolution of the prices that holiday dwelling apply to their clients.

Type of operation: monthly continuous survey.

Population scope: holiday dwellings and/or companies operating holiday dwellings.

Geographical scope: the entire national territory, with the exception of Ceuta and Melilla where there are no establishments of this type.

Reference period of the results: the month.

Reference period of the information: The consultation of basic data refers to a fortnight of the month, chosen randomly, in such a way that among all the establishments they cover the complete month.

Type of sampling: stratified sampling by province and size of establishment, and for Canarias and Illes Balears stratified at island-size level.

Collection method: questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the [methodology and the standardised methodological report](#) for each of them in INEbase.

The main objective of the Campsite Occupancy Survey (COS) is to ascertain the behaviour of a series of variables that make it possible to describe the segment that occupies this type of accommodation within the tourist sector, both from the point of view of supply and demand.

The Tourist Campsite Price Index (TCPI) is a statistical measure of the monthly evolution of the prices that campsites apply to their clients.

Type of operation: monthly continuous survey.

Population scope: camping establishments.

Geographical scope: the entire national territory, with the exception of Ceuta and Melilla where there are no establishments of this type.

Reference period of the results: the month.

Reference period of the information: seven consecutive days of each month, chosen randomly in such a way that all the establishments cover the whole month.

Sample size: approximately 1200 establishments.

Type of sampling: comprehensive survey in all provinces.

Collection method: questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the [methodology and the standardised methodological report](#) for each of them in INEbase.

The main objective of the Rural Tourism Accommodation Occupancy Survey (RTAOS) is to ascertain the behaviour of a series of variables that make it possible to describe the fundamental characteristics of this type of accommodation within the tourist sector, both from the point of view of supply and demand.

The Rural Tourism Accommodation Price Index (RTAPI) is a statistical measure of the monthly evolution of the prices that entrepreneurs of this type of accommodation apply to their clients.

Type of operation: monthly continuous survey.

Population scope: rural tourism establishments registered as such in the corresponding register of each Autonomous Community.

Geographical scope: the entire national territory, with the exception of Ceuta and Melilla where there are no establishments of this type.

Reference period of the results: the month.

Reference period of the information: The consultation of basic data refers to all the days of the month.

Type of sampling: comprehensive survey in all provinces except those where the population size is large enough to take a sample.

Collection method: questionnaire filled in directly by the establishment.

For more information on these statistical operations, you can consult the [methodology and the standardised methodological report](#) for each of them in INEbase.

The main objective of the Hostels Occupancy Survey (HOS) is to ascertain the behaviour of a series of variables that make it possible to describe the fundamental characteristics of this type of accommodation within the tourist sector, both from the point of view of supply and demand.

For more information on this statistical operation, you can consult the [methodology and the standardised methodological report](#) in INEbase.

² To facilitate the comparability between data from different Autonomous Communities (and because of the different regulation and different characteristics), a group called rural house has been created, with those establishments with similar typology (location, capacity, etc...). The variables included in the previous table have been estimated with that type of establishments.
