Methodological note 2010

Indicators on the Profitability of the Hotel Sector Base change 2008

In the year 2010, the INE began to publish two new variables pertaining to the **Indicators on the Profitability of the Hotel Sector**: the **ADR** (*Average Daily Rate* or *Average Invoicing per Occupied Room*) and the **RevPAR** (*Revenue Per Available Room* or *Income per Available Room*), both compiled with information that hotel establishments provide in the questionnaire of the Hotel Occupancy Survey (HOS).

The changes occurring in the sector in recent years encouraged the introduction of certain modifications in said section of the questionnaire, from January 2008 onwards. With these changes, we hope, on the one hand, **to include the new distribution channels favoured by generalised Internet use**, and on the other hand, **to adapt the questionnaire to the terms and concepts that are most frequently used within the sector**, as well as to the data available in the business management systems themselves.

The calculation and dissemination of the two new indicators broadens the information demanded by the hotel sector, thus increasing the great utility of the HOS. They do not respond, therefore, to a regulatory demand on behalf of the European Union, but rather, to the needs for information expressed by the sector itself.

These two variables, together with the occupancy rate by room, constitute an important source of information for hotel establishments, which allows them to evaluate their price policy or *revenue management*.

On the other hand, so as to avoid saturating users with indicators that hinder the interpretation of the results, the Hotel Income Index (HII) has ceased to be published, with the last data available corresponding to December 2009.

Available on the INE website, http://www.ine.es/en/welcome_en.htm, are the ADR and RevPAR series, since January 2008, with data on a national level, by category and by Autonomous Community.
