#### Revision and updating of data

Coinciding with today's publication, the INE has updated the data corresponding to the month of September 2018 of the Hotel Price Index (HPI) and of the Indicators on the Profitability of the Hotel Sector (IPHS).

#### Methodological note

The main objective of the Hotel Occupancy Survey (HOS) is to ascertain the behaviour of a series of variables that make it possible to describe the fundamental characteristics of the hotel sector, both from the point of view of supply and demand, and thus meet the need for knowledge of the sector by national institutions and the requirements of international organisations.

The Hotel Price Index (HPI) is a statistical measure of the monthly evolution of the prices that hotel entrepreneurs apply to their clients.

The main objective of the Indicators of Profitability of the Hotel Sector (IRSH) is to facilitate decision making in the hotel sector. These are the *Average Daily Rate* (ADR), which collects the average daily income per occupied room; and the *Revenue per Available Room* (RevPAR), which collects the average daily revenue per available room.

**Type of operation**: monthly continuous survey.

**Population scope:** all hotel establishments.

**Geographical scope**: the entire national territory.

Reference period of the results: the month.

**Reference period of the information:** seven consecutive days of each month, chosen randomly in such a way that all the establishments cover the whole month.

**Sample design:** stratified sampling by province and category of the establishment, being comprehensive those strata of 4 and 5 gold star categories.

Sample size: approximately 9,250 establishments in winter and 11,200 in summer.

**Collection method:** questionnaire filled in directly by the hotel establishment.

For more information on these statistical operations, you can consult the <u>methodology and the standardised methodological report</u> for each of them in INEbase.
