Methodological note

The **Annual Industrial Products Survey** is an annual structural survey aimed at all establishments dedicated to the industrial sector (Sections B and C of the CNAE 2009).

This operation makes it possible to provide information, in physical amounts and as a value, on the production of a series of industrial products (approximately 4,000) that account for a significant part of the Spanish industrial sector.

The Annual Industrial Products Survey is aimed at a sample of around 54,000 establishments. It allows detailed national results to be obtained for the different products that make up the survey, as well as aggregated results by Autonomous Community and by groups of activities in which the industrial activity has been sectored.

The National Statistics Institute (INE) is publishing today the results of the survey, with a gap of less than six months after the end of the reference period.
