

30 november 2021

**Wage decile of the main job. Economically  
Active Population Survey (EAPS)  
Year 2020**

**Main results**

- The average monthly wage (in gross terms) measured by the EAPS was 2,038.6 euros in 2020, an increase of 2.8% over 2019.
- 40% of employees earned between 1,336.6 and 2,295.2 euros in 2020. 30% earned 2,295.2 euros or more and the remaining 30% less than 1,336.6 euros.
- The economic activity with the highest proportion of high wages (located in the three highest deciles) was *Financial and insurance activities*. On the other hand, the branch with the lowest remuneration (located in the three lowest deciles) was *Hospitality*.
- The Autonomous Communities with the highest concentration of high salaries were Comunidad de Madrid (40.4% of employees with earnings of at least 2,295.2 euros per month), País Vasco (40.2%) and Comunidad Foral de Navarra (38.4%). In this high-wage bracket, the Autonomous Communities least represented were Canarias (20.5%), Illes Balears (22.2%) and Extremadura (22.3%).

Wage deciles are calculated as follows: all employees are ordered according to the amount of the monthly wage<sup>1</sup> received and then divided into 10 equal groups, that is, with 10% of the workers in each group. The first decile corresponds to the first group of employees, i.e. the 10% with the lowest wages; the second, the following 10%, and so on until the tenth decile corresponding to the 10% of employees with the highest income. Each decile is defined by its average (average wage of the group) and by the lower and upper wages that delimit it. The employed population in 2020 was 16,103,800 people. In each decile there are, therefore, some 1.61 million employees.

In order to facilitate the analysis of wage distribution, three groups have been defined to which the vast majority of graphical information will refer.

The largest group, made up of 40% of employees in the intermediate deciles (6,441,500 persons), had a gross monthly wage between 1,336.6 and 2,295.2 euros.

A second group consists of 30% of employees who are in the highest remuneration bracket, formed by the grouping of the last three deciles. This consisted of 4,831,150 employees with a gross monthly wage of at least 2,295.2 euros in 2020.

---

<sup>1</sup> The monthly wage is calculated by dividing by twelve the total wage received in the year, prorating wage payments that are not monthly (among others, extraordinary payments).

Finally, the remaining 30% of employees are in the low-wage zone, formed by the first three deciles. This consisted of approximately 4,831,150 individuals who earned less than 1,336.6 euros gross per month in 2020.

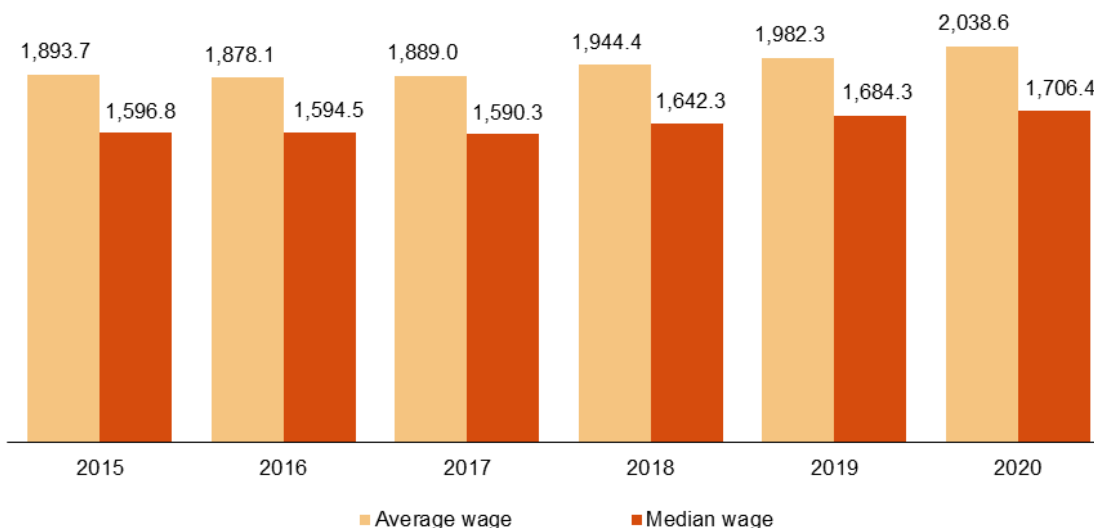

When analysing the wages associated with the modalities of a given characteristic (for example, the earnings of men and women), we should bear in mind that these wages may also be determined by other underlying variables, such as seniority in employment, type of working day, level of training, etc., which are not equally distributed in each group analysed.

In the estimation of the monthly salary for 2020, Temporary Workplace Reduction Scheme (ERTE) income has been taken into consideration when applicable.

## Average and median wage

The average wage was 2,038.6 euros gross per month in 2020, an increase of 56.3 euros (2.8%) over 2019. On the other hand, the median wage stood at 1,706.4 euros, with an increase of 22.1 (or 1.3%).

### Evolution of the gross monthly wage of the main job. Years 2015-2020. Euros

## Wage distribution by sex

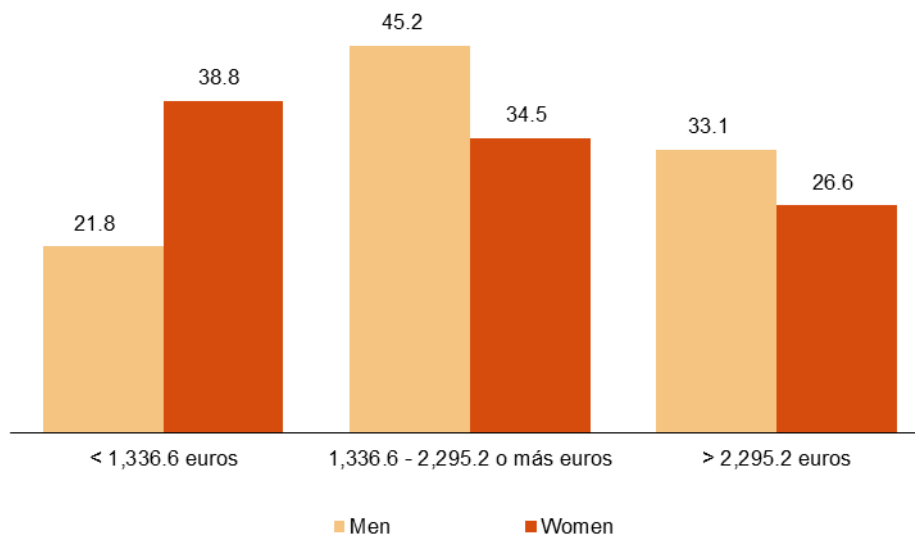

Men had a higher relative concentration in high wages than women. Thus, a total of 33.1% received 2,295.2 euros or more in 2020, as compared with 26.6% of women.

The opposite happened in low wages. 38.8% of women had a wage of less than 1,336.6 euros, as compared with 21.8% of men.

The **average wage** for women in 2020 was 1,852.0 euros per month, while that for men reached 2,210.3 euros.

**Distribution of employees by sex and monthly wage bracket. Year 2020.**

Percentages

**Gross average wages by sex.**

Euros

	2015	2016	2017	2018	2019	2020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6
Men	2,122.5	2,075.7	2,090.6	2,161.3	2,173.6	2,210.3
Women	1,643.8	1,661.0	1,668.7	1,708.4	1,773.3	1,852.0

One of the main reasons for these inequalities in average wages and wage distribution between men and women is that more women work part-time, on temporary contracts and in less remunerated branches of activity.

**Wage distribution by age**

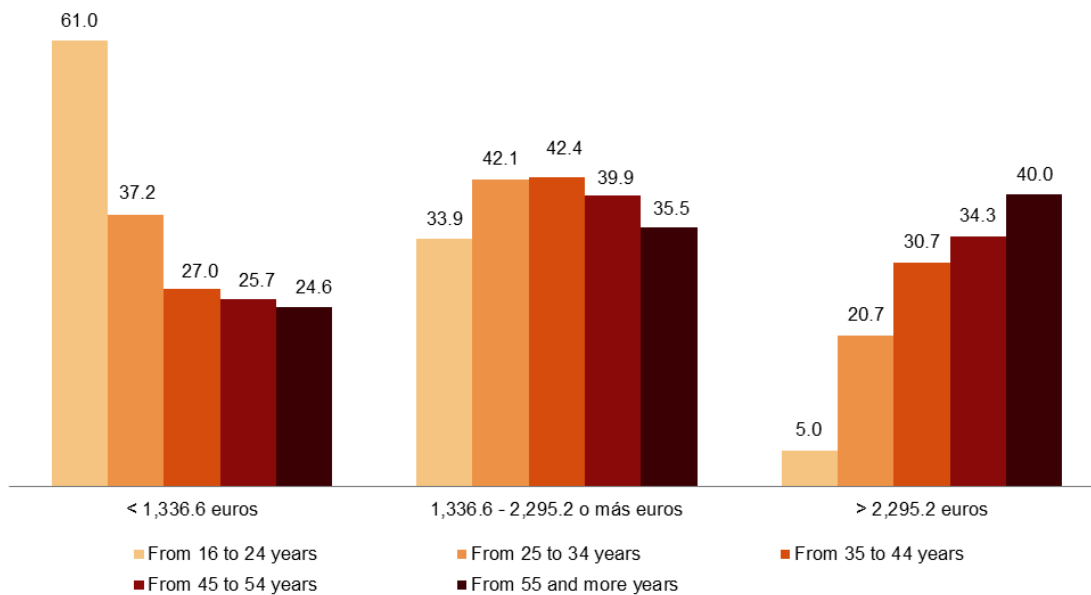

Younger employees were concentrated in lower wages, while those who were older had a greater relative weight among the higher wages.

The highest wage level for older workers was determined by a higher proportion of permanent contracts, more seniority in the job and more work experience. Likewise, the lowest wage level among younger groups was explained by a higher proportion of part-time jobs and temporary contracts and by lower seniority.

Thus, 61.0% of employees under the age of 25 received a monthly wage below 1,336.6 euros in 2020. The percentage of those who had a wage greater than 2,295.2 euros in this age group was 5.0%.

Among employees aged 55 and over, 24.6% were in the low monthly wage bracket (less than 1,336.6 euros), while 40.0% were in the high bracket (more than 2,295.2 euros).

**Distribution of employees by age group and monthly wage bracket.**  
**Año 2020.** Percentages

The average gross wage increased with age, going from 1,207.1 euros that young people under 25 received on average, to 2,361.2 euros for employees aged 55 and over.

**Average gross wages by age group.**  
 Euros

	2015	2016	2017	2018	2019	2020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6

From 45 to 54 years	2,118.3	2,083.4	2,097.8	2,140.7	2,157.1	2,199.4
From 55 and more years	2,260.3	2,228.1	2,169.2	2,205.6	2,306.3	2,361.2

**Wage distribution by level of education**

In general, the higher the level of education, the higher the wage. In 2020, 43.3% of people with a low level of education (at most they had completed compulsory education) had a wage of less than 1,336.6 euros. In the case of people with second stage secondary education or equivalent, the percentage of those who received low salaries was 36.8%, while in those with higher education that percentage reached 18.6%.

In 2020, 48.5% of wage earners with a higher degree had salaries in the highest bracket (they earned more than 2,295.2 euros per month). On the other hand, 18.4% of those with intermediate studies and 8.6% of those with low educational level exceeded that salary level.

**Distribution of employees by level of education and monthly wage bracket.**  
Year 2020. Percentages

The average wage received by employees who had at most first stage secondary education was 1,337.8 euros, while that of those with higher education was 2,553.2 euros.

For wage earners with a second stage secondary education level, the average salary decreased slightly compared to 2019. On the other hand, the average salary of university graduates increased the most in 2020.

**Average gross monthly wages by level of education attained.**

(1) Includes education for job training and labour insertion

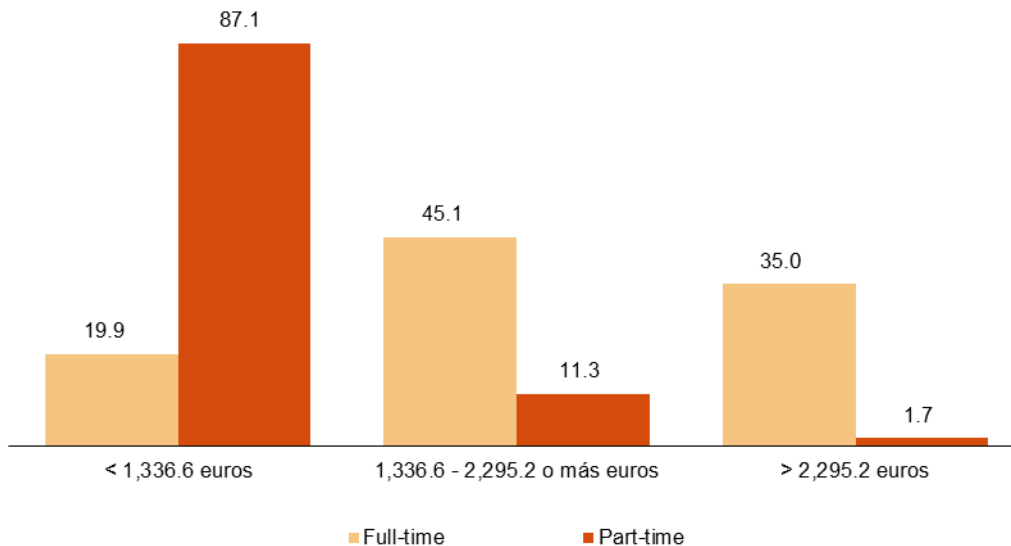

**Wage distribution by type of working day**

One of the most important factors in wage determination is working time. Working less than the usual working day implies a higher probability of being in lower wage brackets.

35.0% of full-time employees earned at least 2,295.2 euros per month in 2020, while 19.9% received less than 1,336.6 euros.

On the contrary, 87.1% of part-time employees earned less than 1,336.6 euros per month. And 1.7% received 2,295.2 euros or more.

**Distribution of employees by type of working day and monthly wage bracket.**  
**Año 2020.** Percentages

The **average gross monthly wage** of full-time employees was 2,258.3 euros in 2020, while that of part-time employees was 800.3 euros.

**Average gross wages of the main job by type of working day**

Euros

	2015	2016	2017	2018	2019	2020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6
Full-time job	2,142.0	2,106.7	2,120.8	2,177.1	2,207.3	2,258.3
Part-time job	697.2	734.2	731.4	746.1	806.2	800.3

**Wage distribution by contract type**

Temporary employees have lower salaries than permanent employees. 43.9% of employees with a temporary contract received a wage of less than 1,336.6 euros in 2020, as compared with 25.6% of permanent employees.

In turn, the percentage of employees with a permanent contract who received 2,295.2 euros or more was 34.7%, as compared with 14.7% of temporary employees.

**Distribution of employees by type of contract and monthly wage bracket.**  
**Year 2020.** Percentages

Employees with permanent contracts received an average gross monthly wage of 2,187.8 euros in 2020. On the other hand, those with temporary contracts received 1,557.8 euros.

**Average gross wages by type of contract or employment relationship.**

Euros

	2015	2016	2017	2018	2019	2020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6
Permanent job	2,090.2	2,079.8	2,086.7	2,142.2	2,162.5	2,187.8
Temporary job	1,314.5	1,312.4	1,343.4	1,389.7	1,479.4	1,557.8

Among the many factors that explain this inequality is the higher educational level of those hired on a permanent basis and the greater weight of temporary contracts in branches of activity with a marked seasonal character and with lower remuneration.

However, the pattern observed in previous years - of greater absolute and relative growth in average wages for temporary employment - has continued.

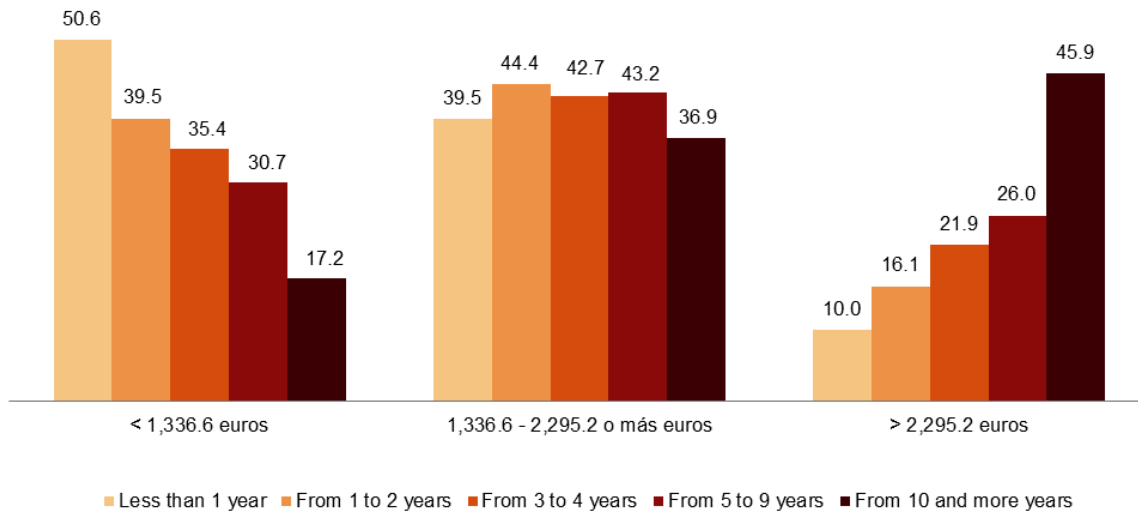

**Wage distribution of employees by length of time they have been in the company**

Employees with more seniority in the company are concentrated in the highest wages, while those with less time have a greater relative weight in the lowest wages.

The percentage of employees with 10 years or more of seniority who received wages of at least 2,295.2 euros gross was 45.9%, while 17.2% were in the lower bracket (less than 1,336.6 euros).

Among employees with less than one year's seniority, 10.0% were in the high monthly wage bracket (2,295.2 euros or more). On the other hand, the percentage of those who had a wage of less than 1,336.6 euros was 50.6%.

**Distribution of employees by time they have been working in the company and monthly wage bracket. Year 2020. Percentages**

Average wages also increased as a function of the time employees have been working at their current job: from an average of 1,409.1 euros earned by employees with less than one year of service, to an average of 2,515.6 euros among those who have been working 10 years or more.

**Average gross monthly wages for time that the employee has been working in the company. Euros**

	2015	2016	2017	2018	2019	2,020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6
Less than 1 year	1,251.7	1,232.3	1,271.9	1,343.7	1,404.8	1,409.1
From 1 to 2 years	1,390.9	1,438.1	1,509.0	1,539.5	1,592.4	1,638.1
From 3 to 5 years	1,576.6	1,538.5	1,661.9	1,686.5	1,818.7	1,775.2
From 5 to 9 years	1,788.2	1,836.0	1,846.8	1,829.6	1,817.3	1,948.9
From 10 and more years	2,425.1	2,397.3	2,382.5	2,448.4	2,475.4	2,515.6

**Wage distribution by branch of activity**

In 2020, the lowest salaries (below 1,336.6 euros) were concentrated in *Hospitality* (68.1%) and in the sector of *Activities of households as employers of domestic personnel* (67.4%).

The higher proportion of part-time jobs and temporary employment can at least partially explain this situation.

On the other hand, the branches of activity with the greatest relative weight in the highest salary deciles (above 2,295.2 euros) were *Financial and insurance activities* (64.8%), *Education* (64.4%) and *Administration and defence; compulsory social security* (61.4%).

The lowest average wages in 2020 corresponded to *Activities of households as employers of domestic personnel* (997.3 euros), *Accommodation and food service activities* (1,119.5 euros) and *Agriculture, forestry and fishing* (1,373.6 euros).

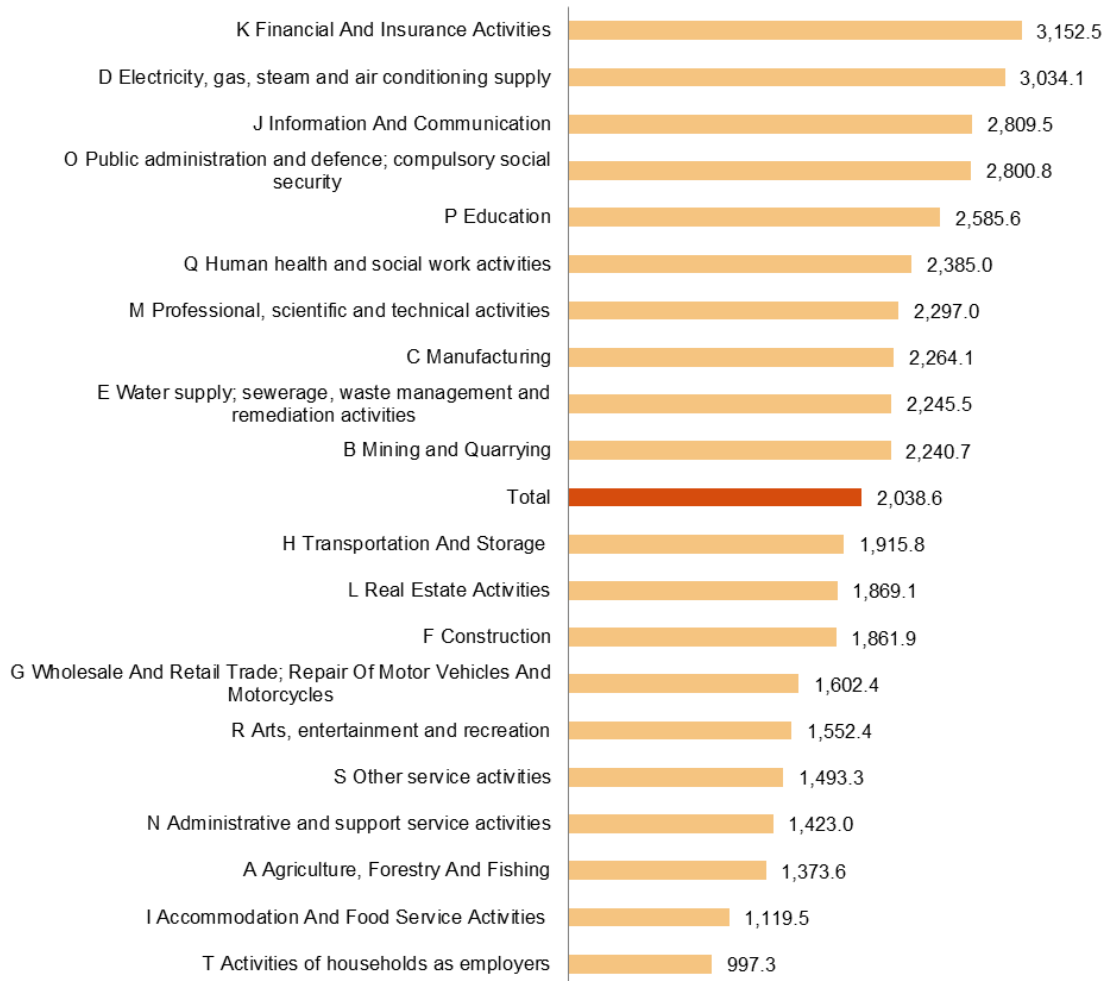

On the contrary, the highest average wages were in *Financial and insurance activities* (3,152.5 euros), *Electricity, gas, steam and air conditioning supply* (3,034.1 euros) and in the *Information and communications sector* (2,809.5 euros).

**Average gross monthly wages by branch of activity. Year 2020. Euros**

**Wage distribution by occupation**

Occupation is another of the most important factors in determining the wage level. The groups of *Directors and managers* and *Scientific and intellectual technicians and professionals* were more represented in high salaries (2,295.2 euros or more), while workers in *Basic occupations* presented a greater concentration in low salaries (less than 1,336.6 euros).

The average monthly wage of those employed in the group of *Directors and managers* was also the highest (4,128.3 euros), followed by *Scientific and intellectual technicians and professionals* (3,100.6 euros).

On the contrary, the lowest average monthly wages were in *Basic Occupations* and in the group of *Workers in catering, personal, and protection services and trade salespersons* (with 1,212.0 and 1,434.1 euros, respectively).

## Average gross monthly wages per occupation. Euros

	2015	2016	2017	2018	2019	2,020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6

## Average gross monthly wages per occupation. Year 2020. Euros

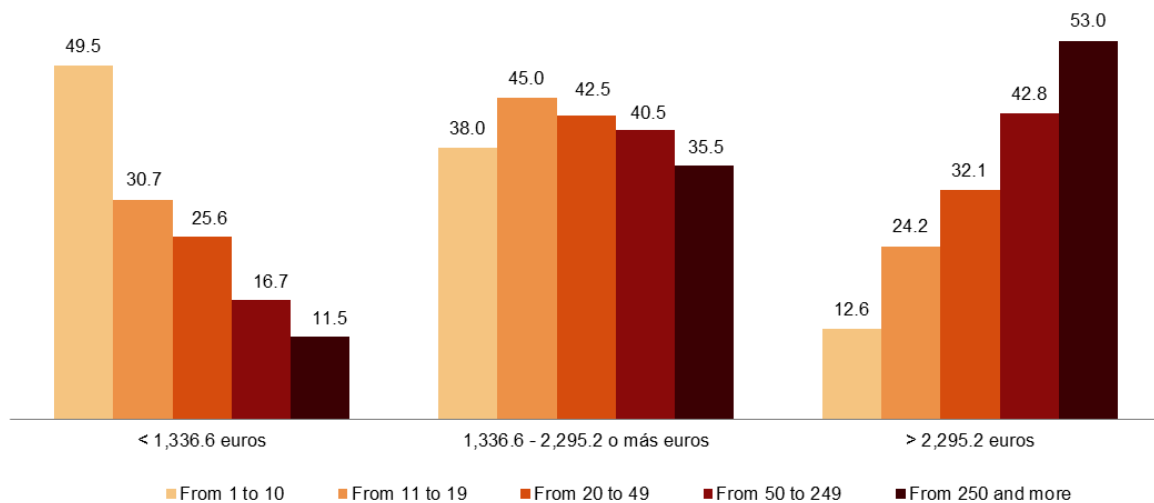

### Wage distribution by size of the work centre

In 2020, the lowest wages were concentrated in establishments with up to 10 workers (49.5% of these employees received a wage of less than 1,336.6 euros), while the equivalent percentage in centres with 250 or more workers was 11.5%.

Conversely, 53.0% of employees in establishments with 250 or more workers had a high monthly salary (2,295.2 euros or more). The equivalent percentage was 12.6% of employees in establishments with up to 10 employees.

### Distribution of employees by size of the establishment where they work and monthly wage bracket. Year 2020. Percentages

The wage increases with the size of the company. Thus, in 2020, the average gross wage in large companies (250 employees or more) was 2,815.2 euros, while in smaller companies, with 10 workers or less, it stood at 1,486.4 euros.

### Average gross monthly wages per number of persons working in the establishment. Euros

	2015	2016	2017	2018	2019	2020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6
From 1 to 10	1,314.3	1,363.5	1,363.4	1,388.9	1,458.5	1,486.4
From 11 to 19	1,768.4	1,678.1	1,735.8	1,787.3	1,848.0	1,880.0
From 20 to 49	1,986.1	2,031.5	1,999.9	2,062.3	2,148.2	2,060.6
From 50 to 249	2,277.3	2,253.3	2,230.9	2,269.1	2,355.5	2,394.4
From 250 and more	2,716.4	2,640.8	2,640.8	2,708.6	2,700.0	2,815.2

**Wage distribution by type of employer (private or public)**

In the private sector, 21.2% of workers earned a salary of at least 2,295.2 euros in 2020, compared to 63.7% of workers in the public sector. The public sector includes all Public Administrations as well as public companies, and workers assigned to mutual insurance companies as well as those who contribute to Social Security.

This greater concentration of high salaries in the public sector was determined by the higher percentage of wage earners with higher education, the type of occupation, the lower weight of part-time work and the greater seniority.

**Distribution of employees in the private and public sectors by monthly wage bracket. Year 2020. Percentages**

The average gross wage in the public sector reached 2,884.7 euros in 2020, while in the private sector it stood at 1,818.6 euros.

**Average gross monthly wages in the public and private sectors. Euros**

	2015	2016	2017	2018	2019	2020
Total	1,893.7	1,878.1	1,889.0	1,944.4	1,982.3	2,038.6
Public sector	2,586.2	2,623.5	2,598.4	2,654.4	2,760.9	2,884.7
Private sector	1,720.0	1,694.2	1,719.7	1,772.0	1,796.9	1,818.6

As already indicated for the deciles, the fundamental factors influencing the differences in the average salary between the sectors were explained by the different occupational structure, the greater weight of workers with higher education, the lower weight of part-time employment, and the higher seniority levels.

## Wage distribution by Autonomous Community

The productive structure in the Autonomous Communities has a large influence on wage levels. Thus, those with the highest concentration of high wages in 2020 were Comunidad de Madrid (40.4% of wage earners had wages above 2,295.2 euros per month), País Vasco (40.2%) and Comunidad Foral de Navarra (38.4%).

On the opposite side, the Autonomous Communities with the highest percentage of employees concentrated in low deciles (wages below 1,336.6 euros) were Extremadura (40.5%), Canarias (40.1%) and Andalucía (37.3%).

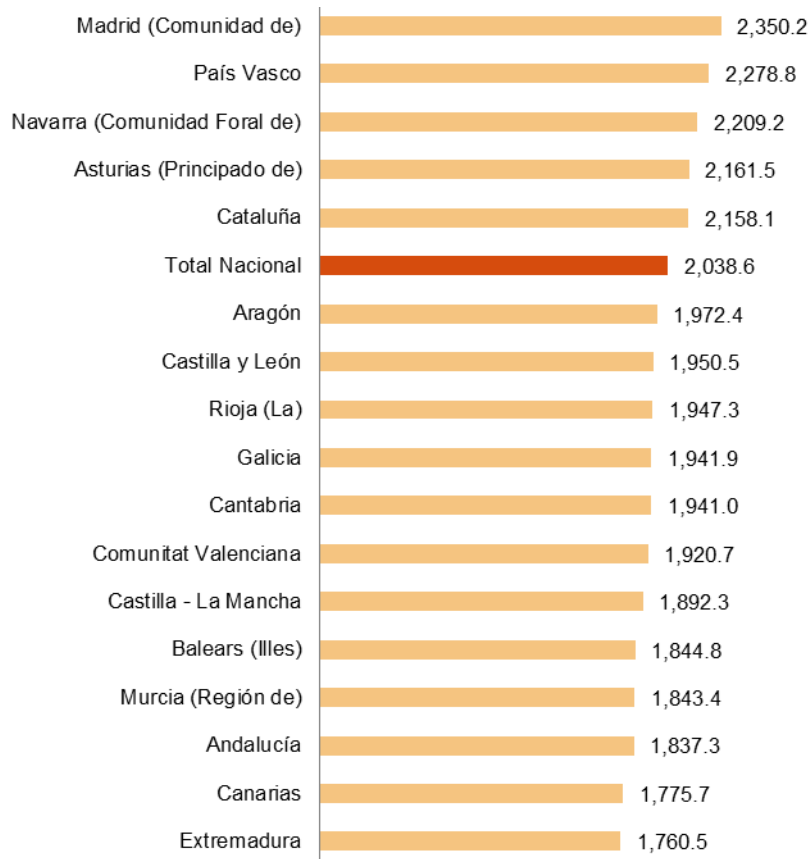

The Autonomous Communities with the highest average salary in the primary job were Comunidad de Madrid (2,350.2 euros), País Vasco (2,278.8 euros) and Comunidad Foral de Navarra (2,209.2 euros).

On the other hand, the lowest average wages were observed in Extremadura (1,760.5 euros), Canarias (1,775.7 euros) and Andalucía (1,837.3 euros).

### Average gross monthly wages per Autonomous Community. Euros

## Average gross monthly wages per Autonomous Community. Year 2020. Euros

### Data Review and Update

The data published today are final. All results are available on INEBase.

## Methodological note

INE statistics are produced in accordance with the Code of Good Practice for European Statistics, which is the basis for the institution's quality policy and strategy. For more information, see the section on [Quality in the INE and Code of Good Practices](#) on the INE's website.

**Type of operation** – Annual structural survey.

**Population scope** - Population of those 16 and over residing in family dwellings in Spain, who have been professionally employed as wage earners.

**Geographical scope** – The entire national territory.

**Reference period for the results** – 2020. Information is collected throughout the reference year, based on the EAPS subsample in the sixth interview in each quarter.

**Information reference period** - 2020 for data from the Economically Active Population Survey (EAPS), data on Social Security affiliation and data on personal income tax declarations.

**Sample size** - About 10,000 families participate per quarter in the EAPS subsample, around 40,000 per year. The sample of wage earners is approximately 30,000 persons.

**Type of sampling** – Two-stage sampling with stratification in the first stage units. The first stage units are the census tracts and the second stage units are the inhabited family dwellings.

**Collection method** - Combination of the information collected in the EAPS with data on estimated earnings from administrative sources (General Treasury of Social Security, State Tax Administration Agency, Tax Office of Navarra<sup>2</sup>, Provincial Council of Bizkaia and Provincial Council of Gipuzkoa).

**Concept of wage** - The concept of wage used is (according to the cited Commission Regulation (EC) No. 377/2008) that of 'monthly wage associated with the main job'; with the main job being the one performed by the person during the reference week of the interview. In case of having several jobs, the main one is the one that provides the most significant income. In particular, if it is a temporary job of less than one month's duration, the wage will be an estimate of the one that would be obtained for a whole month's duration for a similar job. On the other hand, if it is a part-time job, it is not converted to the full-time equivalent. The latter issue has to be taken into account when comparing the wage distributions of full-time and part-time workers.
